Mortgage Subsidies Support Home Demand; External Pressures Persist Despite Easing Fed Hike Expectations

Taylor Ren

+852 5573 3987
taylor.ren@cmschina.com.hk

- Industrial profits and PMI point to firmer production, but demand and cash collection still constrain earnings recovery
- The State Council calls for stronger countercyclical support; mortgage subsidies aid first-home demand, but a broader property recovery remains unconfirmed
- Expectations for an October Fed hike have fallen sharply, but elevated long-term Treasury yields continue to weigh on HK equities

On the domestic macro front, industrial profits rose **15.7% yoy** in January–August, **although monthly growth slowed for a fourth consecutive month in August**. Gains remained concentrated in electronics, high-tech manufacturing and selected upstream industries. **September's manufacturing PMI returned to expansion territory at 50.1**, led by production, while new orders edged lower, indicating that supply is recovering faster than demand. The data support selected technology and resource sectors, **but a broader earnings recovery will still require stronger orders, destocking and cash collection**.

On the domestic policy front, the State Council called for stronger countercyclical adjustment, faster bond deployment and major project starts, **reinforcing expectations 4Q policy support**. Mortgage interest subsidies reduce eligible first-home buyers' interest expenses during the first five years **but have a limited impact on lifetime borrowing costs**. Given their focus on lower-priced, smaller homes, **a broader property recovery still depends on stronger sales and developers' cash collection**.

On the liquidity front, expectations for another Fed hike in October eased after dovish comments from New York Fed President John Williams, softer-than-expected core PCE inflation and weak September payrolls. **The implied probability of an October hike fell from nearly 70% to around 20%**. While this reduces some valuation pressure on Hong Kong growth stocks, elevated inflation, energy prices and Treasury yields mean **global liquidity conditions have yet to turn broadly accommodative**.

Looking ahead, domestic policy support and lower Fed hike expectations should provide some support, but demand and earnings recovery remain to be seen. **We expect range-bound trading with selective opportunities**. Key indicators include Golden Week consumption, post-holiday fiscal implementation and credit demand, alongside US inflation, energy prices and the Fed's FOMC minutes.

For allocation, we suggest high-dividend telecoms, utilities, energy companies and cash-generative SOEs as core holdings. Within technology, we prefer internet platforms, cloud services and AI application companies with resilient core businesses, strong earnings visibility and improving AI monetization.

Hong Kong market performance recap: Last week, the Hong Kong stock market posted broad-based losses. Among the major indices, the Hang Seng Index fell by **2.19%**, while the Hang Seng Tech Index fell by **3.57%**. A-share premium over H-shares increased to around **27%**. By sector, most major industries in the Hong Kong market posted losses, with **the Healthcare and Consumer Staples sectors leading while Information Technology dropped**.

Fund flow: Net inflows from southbound funds, net outflows from local and foreign funds. 1) Hong Kong-listed ETFs recorded net outflows of **HKD3.60bn**, and the YTD net inflows reached **HKD13.53bn**; 2) Foreign investors recorded net outflows of **USD0.1bn** last week; 3) Southbound funds recorded net inflows of **HKD0.3bn**, well below the three-month average of HKD 9.3 billion, mainly into the Financials and Real Estate & Construction Sectors.

Liquidity conditions: Interest rates in the Hong Kong market remained stable. The overnight HIBOR stood at **2.81%**, while the 3-month HIBOR stood at **3.24%**. Meanwhile, the USD/HKD exchange rate was at **7.84**, approaching the weak-side convertibility undertaking. In the U.S., the 2-year Treasury yield stood at **4.83% (up 2bps)**, while the 10-year yield was **5.28% (up 11bps)**. **Overall liquidity conditions are tightening.**

Risks: Geopolitical conflicts, weak corporate earnings, black swan events.

Market View and Outlook

1. Domestic macro: Production-side momentum improves, but earnings recovery remains constrained by demand and cash collection

In 8M26, profits at industrial enterprises above designated size rose **15.7% yoy**, slowing by 1.9ppts from 7M26. Profit growth in August slowed for a fourth consecutive month to **4.2% yoy**. A high comparison base weighed on the monthly reading, but the weakening in profit momentum still warrants attention. Cumulative operating revenue growth edged up to 6.6%, while the profit margin on operating revenue rose by 0.44ppt yoy to 5.66%. **Higher prices and lower unit costs continued to support profits, but stronger revenue growth has yet to reaccelerate profit growth.**

Profit growth remained concentrated in technology manufacturing and selected upstream industries. Electronics industry profits rose 110% yoy in 8M26, accounting for 62% of overall industrial profit growth. High-tech manufacturing, energy and nonferrous metals also maintained relatively strong momentum. By contrast, profit growth slowed in consumer goods industries, while automobiles and non-metallic mineral products remained under pressure. **Industrial profit growth is currently being driven mainly by technology manufacturing and industries benefiting from higher prices, while domestic demand-related sectors have yet to improve in tandem.** Operating pressures also remained elevated. Inflation-adjusted inventory growth edged lower in August, but days of finished-goods inventory turnover remained high compared with the same period in recent years, while the collection period for accounts receivable continued to lengthen. This indicates that final demand and cash flow are improving more slowly than production and reported profits. Earnings quality therefore needs to be assessed alongside inventory digestion and receivables collection.

The manufacturing PMI rose by 0.3 percentage point to **50.1** in September, returning to expansion, although the improvement was driven mainly by production. The production index increased to 51.7, while the new orders index edged down to 50.5 and the new export orders index stood at 50.0. Fading disruptions from extreme weather, the arrival of the traditional production peak season and faster implementation of selected growth-supporting projects collectively accelerated manufacturing activity. However, the average manufacturing PMI in the third quarter remained below that of the second quarter, indicating that the September improvement did not fully reverse the quarter's broader weakness. **Supply continues to recover faster than demand, which remains the key feature of the current PMI composition.**

Price indicators continued to rise. The input price index increased to 60.8 in September, while the output price index rose to 54.0. Higher energy and commodity prices may support a month-on-month improvement in the producer price index. Rising industrial prices benefit upstream revenue and nominal profits, but input prices are still increasing faster than factory-gate prices. Whether midstream and downstream companies can pass on these costs will continue to depend on final demand. In the non-manufacturing sector, **the construction business activity index rose to 50.3, returning above the expansion threshold after eight consecutive months below 50 and indicating faster construction progress and project implementation.** However, activity in real estate services remained weak, and stronger construction activity should not be interpreted as evidence of a broad recovery in commercial housing demand.

For Hong Kong equities, the industrial profit and PMI data continue to support earnings expectations for electronics, communications equipment, computing infrastructure and selected commodities. The recovery in construction activity is also positive for infrastructure-related demand. However, profit growth remains concentrated in a limited number of industries, while inventory and cash collection pressures persist. Index-level earnings improvement may therefore lag the recovery in selected sectors. Key indicators to monitor include whether new orders catch up with production, whether higher producer prices translate into stronger downstream demand, and whether inventory and receivables cycles shorten.

2. Domestic Policy: The State Council calls for stronger countercyclical adjustment; mortgage subsidies offer limited upside to Hong Kong-listed mainland developers

Last week's State Council executive meeting called for **stronger countercyclical macro policy adjustment, faster implementation of existing measures and the introduction of a package of incremental policies**. The meeting urged faster bond issuance and deployment, quicker starts for major projects and better use of available headroom under local-government debt ceilings. It also called for monetary policy tools to be adjusted when appropriate, larger relending quotas for technological innovation, equipment upgrades, agriculture and small businesses, and further measures to stabilize the property market and support employment and income growth. Compared with earlier meetings that focused mainly on policy implementation, this meeting provided a clearer signal of incremental support. **However, the scale of that support will depend on subsequent fiscal arrangements and the implementation of specific policy tools.**

On September 29, the Ministry of Finance, the People's Bank of China and the National Financial Regulatory Administration announced a mortgage interest subsidy programme for homebuyers. Effective from October 1, with an initial application window of one year, the programme applies to households using newly issued commercial mortgages to purchase their first home, provided that the property has a floor area of no more than 120 square metres and a total price of no more than RMB1.5 million. The fiscal authorities will provide an annual interest subsidy of one percentage point for up to five years on eligible mortgage principal of no more than RMB1 million.

The policy primarily reduces the initial interest burden for first-home buyers rather than delivering a permanent, broad-based reduction in mortgage rates. For long-tenor mortgages, the subsidy lasts no more than five years, meaning that the reduction in the effective mortgage rate over the full loan term is considerably smaller than the one-percentage-point subsidy during the covered period. **The policy therefore provides relatively direct relief to near-term mortgage payments and household cash flow, but its impact on lifetime borrowing costs and housing investment returns is more limited.**

The floor-area and property-value thresholds mean that the policy mainly benefits lower-priced, smaller first homes. Its support may therefore be more direct in lower-tier cities and the secondary housing market. In recent years, new-home supply in core cities has increasingly focused on upgrade-oriented projects. As a result, the direct benefit to new-home markets in first-tier and other higher-tier cities is likely to be relatively limited.

Fiscal funding of the subsidy lowers households' effective financing costs without requiring banks to cut mortgage rates directly and further compress net interest margins. If the policy lifts mortgage demand and housing transactions, it could support bank lending, improve developers' sales cash collection and gradually benefit property-related downstream industries such as home furnishings and appliances, renovation and property management. However, the ultimate impact will depend on whether the policy generates additional transactions. For Hong Kong-listed mainland developers, the policy may reduce tail risks in the property market and improve sales expectations. However, listed developers have greater exposure to higher-tier cities and upgrade-oriented housing, which do not fully align with the programme's coverage. Markets had also priced in some expectations of further property support before the announcement. **We therefore expect the subsidy to provide only limited sustained support for the sector. Further confirmation is still required from sales and cash collection data.**

3. Overseas Liquidity: Weaker US economic data sharply reduce expectations for an October rate hike

After the Federal Reserve raised rates by 25 basis points in September, US economic resilience and persistent inflation initially led markets to price in another hike in October. At the beginning of last week, the implied probability of an October hike remained close to 70%. It subsequently declined as **Fed officials' comments, inflation data and employment figures successively tempered rate-hike expectations**. On September 29,

New York Fed President John Williams said that, following September's increase, there was "no need for urgency" and that the Fed had time to gather more data. While he still considered one further hike this year possible, he pointed to a move later in the year. Markets consequently reduced expectations of an immediate October hike, with the implied probability falling to around 50%.

US personal consumption expenditures inflation for August, released on September 30, further strengthened expectations that the Fed would pause. Headline PCE inflation rose 3.4% year-on-year, while core PCE increased 3.0% year-on-year and 0.2% month-on-month, all below market expectations. Although inflation remained well above the Fed's 2% target and consumer spending continued to grow at a solid pace, softer-than-expected underlying price pressures reduced the urgency of consecutive rate increases. The implied probability of an October hike consequently fell below 40%.

The employment report released on October 2 became another key driver of the repricing. US nonfarm payrolls increased by only 29,000 in September, well below expectations, while the unemployment rate rose from 4.1% to 4.2%. Payroll gains for July and August were revised down by a combined 60,000, and average hourly earnings rose by just 0.1% month-on-month. Slower employment growth means that continued rapid tightening could increase downside risks to the economy. **The market-implied probability of an October hike therefore fell to around 20%, with expectations shifting from consecutive tightening to an October pause while retaining the possibility of another increase later this year.**

For Hong Kong equities, lower expectations of an October hike provide marginal support for risk appetite and growth-stock valuations, with interest-rate-sensitive sectors such as internet platforms, biotechnology and Hong Kong property developers relatively better positioned. However, **the shift mainly points to a slower pace of tightening and does not mean that overseas liquidity has turned accommodative.** US inflation remains above target, while energy prices and trade policy could continue to disrupt the inflation outlook. Meanwhile, Treasury supply and term premiums are keeping long-term US yields elevated, meaning external valuation pressure on Hong Kong equities has not been fully relieved. Key indicators to monitor include US inflation for September, energy prices and Fed officials' comments, which will help determine whether rate-hike expectations continue to recede.

4. Outlook: Policy and liquidity expectations improve at the margin, with selective opportunities remaining

Looking ahead, stronger domestic production momentum and stepped-up countercyclical adjustment should help stabilize risk sentiment toward Hong Kong equities. Lower expectations of an October Fed hike also marginally ease external valuation pressure. However, the recovery in domestic demand and corporate earnings still requires confirmation, while long-term US Treasury yields remain elevated. **We therefore expect Hong Kong equities to remain range-bound in the near term, with opportunities concentrated in selected sectors.**

Key indicators include Golden Week consumption and travel data, as well as post-holiday fiscal project implementation and credit demand. Overseas, investors should monitor the minutes of the Fed's September meeting, US inflation for September and energy prices to assess whether expectations of an October pause can be sustained. After Southbound Stock Connect reopens on October 8, net southbound flows and market performance will also provide important signals on changes in risk appetite.

For allocation, we continue to recommend combining high-dividend stocks with quality technology companies. Telecoms, utilities and state-owned enterprises with stable cash flows and dividends can serve as core holdings. Within technology, prioritise internet platforms, cloud service providers and AI application companies with resilient core businesses, strong earnings visibility and demonstrated progress in AI monetisation. Companies with high capital expenditure, continued reliance on external financing and earnings yet to stabilise, limit position sizes and monitor whether additional investment can translate into profits and cash flow.

Hong Kong stock market weekly review

Last week, the Hong Kong stock market experienced more losses than gains. Among the major indices, the Hang Seng Index fell by 2.19%, while the Hang Seng Tech Index fell by 3.57%. The A-share premium over H-shares increased to around 27%.

Micro liquidity in Hong Kong market

1. Trading volume and sentiment—Trading activity has declined

Last week, the average daily turnover in Hong Kong stocks was HKD183.2bn, down HKD3.5bn wow, ranking in the 44.9th percentile over the past three years.

Figure 3: HK weekly turnover

Sources: Wind, CMS (HK) Research; Data as of 2 October 2026

The Relative Strength Index (RSI), a reliable sentiment gauge, currently the Hang Seng Index resides in neutral territory. Historically, the 14-day RSI has proven effective for major Hong Kong indices; values crossing above 70 or below 30 generally signal overbought or oversold levels and often precede mean reversion. Currently, the Hang Seng Index RSI stands at 36.0 while Hang Seng Tech RSI is 34.7.

2. Capital flows— Net inflows from southbound funds, net outflows from local and foreign funds

In the short term, market prices reflect the trading and positioning decisions of various investors, helping gauge consensus among market participants. We track flows from local Hong Kong investors, overseas capital, and southbound flows separately.

1) Hong Kong local funds

Hong Kong-listed ETFs serve as a proxy for local investor behaviour. Last week, they recorded net outflows of HKD3.60bn, and the YTD net inflows reached HKD13.53bn.

Figure 6: Weekly net inflows into HK-domiciled ETFs (HKD100mn)

Sources: Wind, CMS (HK) Research; Data as of 2 October 2026

2) Overseas capital

Last week, foreign capital flowed out of H-shares by USD0.1bn, and YTD net inflows have reached USD21.48bn.

Figure 7: Foreign Capital focused on H-Shares

Sources: EPFR, CMS (HK) Research; Data as of 30 September 2026

3) Southbound flows

Last week capital net inflows reached HKD0.3bn, well below the three-month average of HKD9.3bn, and the proportion of southbound turnover decreased to 15.1%. Sector-wise, southbound funds favoured the Financials and Real Estate & Construction Sectors.

Top picks

Ticker	EN Name	CN Name	Market Cap (LC bn)	Price (LC)	TP (LC)	EPS growth		P/E (x)		Rationale	Analyst
						2026	2027	2026	2027		
Internet											
GOOGL US	Alphabet	Alphabet	4,201.0	343.5	460	29%	26%	24.8	19.6	In Search, YouTube and Cloud, Alphabet has re-established leadership across the full technology stack and continues to maintain an edge in both AI software and hardware. We reiterate our view that Alphabet is the most innovative company among the Mag 7 with strong R&D culture and a number of world-leading technologies that remain underappreciated by the market (e.g., Waymo, quantum computing, and TPUs, which have only recently gained proper recognition). We forecast FY26E revenue growth of 21%, with advertising revenue and Google Cloud growing 14% and 59% yoy, respectively. Our DCF TP implies FY26E/27E P/E of 32x/26x.	Tommy Wong
META US	Meta	Meta	1,854.8	728.1	830	28%	17%	13.4	11.4	We believe Meta will continue to maintain its leadership position in digital advertising, benefiting from AI advancements. Recent drag from defeat from social media addiction trial too early to conclude long term impact given existing protection to platforms via Section 230 and first amendment. We forecast FY26E yoy growth of 25% for advertising and 9% for Reality Labs. FY26E adjusted EBITDA is expected to grow 22% yoy. CapEx in 2026 is projected at USD125-145bn (vs. USD71bn in 2025). Our DCF TP implies FY26E/27E P/E of 21x/18x.	Tommy Wong
AMZN US	Amazon	亚马逊	2,713.0	251.5	326	30%	25%	21.0	16.7	We believe 1Q marked a significant turning point for AWS, with 28% yoy, the fastest pace in 15 quarters, while the company continues to invest heavily in capacity. We are optimistic about the monetization prospects of large-scale capital expenditures through expansion in core cloud services and the chip business. We believe Amazon's other bets, such as chips, Amazon LEO, and Zoox driverless rentals, also have catalytic potential. We project revenue of USD821.6/911.7bn for 2026/27 (+15%/11% yoy), with NG NP up 31%/26% yoy. Our TP of USD326 implies P/E of 37x/26x for FY26/27.	Tommy Wong
RBLX US	Roblox	Roblox	31.5	44.1	60	n.a.	n.a.	n.a.	n.a.	We expect Roblox to have strong catalysts in both the short and long term after recent stock price pressure. Short term: The lifting of the Russian ban will bring back 4mn potential DAU; the release of the sequel to the hit game Grow a Garden may continue the success of the first episode; the age stratification system continues to strengthen protection for minors and is not expected to have a significant negative impact on user engagement; and summer vacation is strong push for DAU and spend time. Long term: The new creator revenue sharing program will attract creators to produce more high-quality games, driving growth in adult users and thus increasing monetization; the platform's advantages of social networking and in-game economy are expected to continue to enhance its competitiveness in the gaming industry. Roblox's current valuation is 5.6x P/S, near its historical low. Our TP is USD60, which implies 7x/6x FY26/27E P/S.	Tommy Wong
BABA US	Alibaba	阿里巴巴	263.3	105.9	188	n.a.	81%	24.1	13.6	We expect group revenue to grow at +9%/+12% yoy in FY27/28E and NG NP +77%/+29% yoy. Our new SOTP valuation methodology has 3 segments: AI MaaS, external traditional cloud, and legacy commerce-related business, our SOTP-TP is at USD188, implying 31x/20x FY27/28E P/E. Positive on revenue potential growth driven by continuous AI model/product iteration, cloud margin may improve with higher mix of high margin MaaS business and scaling of T-Head's self-developed AI chips. Catalysts include: 1) T-head has potential IPO. 2) Loss reduction in quick commerce 3) CMR growth recovery.	Crystal Li
700 HK	Tencent	腾讯	3,829.8	421.2	620	11%	9%	10.8	9.5	We forecast Tencent's group revenue to grow by 10%/10% yoy in 2026/2027, reaching RMB824.9bn/910.5 bn respectively. NP is expected to increase by 7%/8% yoy. We remain optimistic about the steady growth of Tencent's core business and the trend of steady profit expansion. In the AI era, Tencent's product strength and ecosystem advantages will become more prominent. We are optimistic about the differentiated positioning and optimized user experience of products such as WeChat Agent (C-end) and Workbuddy (To-B). Key catalysts include: 1) Continuous iteration of AI products and models, driving accelerated growth in core business and incremental revenue from cloud services; 2) New game launches; 3) AI-assisted improvement in advertising efficiency; 4) Increased shareholder returns.	Crystal Li
JOYY US	JOYY	欢聚	3.9	79.2	94	n.a.	16%	11.5	11.1	We forecast JOYY FY26E group revenue/NG OP +10%/+12% yoy, driven by three core businesses: Social Entertainment, BIGO Ads and Shopline, all accelerate growth. And based on strong cash position, the company announced a new 3-year USD1.5bn shareholder return plan with total shareholder yield at c.18%, attractive among our internet coverage. Our TP is at USD94, based on FY26/27E 17x/14x P/E.	Crystal Li

Healthcare											
6938 HK	Ribo Life Sciences	瑞博生物	9.3	54.3	105	n.a	n.a	n.a	n.a	We believe Ribo is a global siRNA leader. Core asset RBD4059 (first FXI siRNA) features 3–6m dosing and clean bleeding profile, with potential to reshape the USD60bn anticoagulation market. Two PhIIb trials (AF/VTE) filed Apr–May, starting Q3 in Europe. Key near-term catalyst: PhIIa CAD data at ESC end-Aug (PhI showed >90% FXI knockdown, no bleeding). External validation accelerating: Bayer NDA filed, BMS/J&J PhIII readout Q4. Metabolic pipeline: RBD5044 (APOC3 #2, PhII enrolling) and RBD7022 (PCSK9, PhIII ongoing) + USD4.4bn Madrigal partnership. DCF-based TP HKD105.	Jonah Chen
1801 HK	Innovent Bio	信达生物	167.9	96.3	122	136%	57%	n.a	n.a	We maintain a “BUY” rating for the following reasons: Strong commercial portfolio: 1) 10 approved products; diverse R&D pipeline: approximately 30 clinical assets (including PD-1XIL-2 bispecific antibody IBI363). 2) The approval of Mazdutide in 2025 will strengthen the company's presence in the cardiovascular-metabolic (CVM) field. 3) As the first domestic IL23p19 product in the autoimmune field, it will drive the company's immunology business.	Jonah Chen
3692 HK	Hansoh	翰森制药	207.0	34.1	55	13%	16%	37.2	32.0	After completing the second out-licensing deal with Regeneron, we expect the consensus revenue forecast for this collaboration to rise, as we assume in our model that it will exceed RMB 1 billion. Additionally, we are optimistic about the company's growth prospects beyond Amile, such as its EGFR/cMET bsAb and ADC pipelines, as well as its stronger cash flow generation capability. We believe ongoing pipeline upgrades are a key catalyst for re-rating.	Jonah Chen
2162 HK	Keymed Bio	康诺亚	23.6	78.9	115	-3%	44%	n.a	n.a	We believe the Chinese immunology market is vast and is not yet a zero-sum game. CM310 has the potential to achieve RMB 7 billion in sales, significantly higher than the company's peak expectation of RMB 5 bn and market expectations. We are optimistic about CM512, a TSLPxIL13 bispecific antibody in the company's current pipeline, which has the potential to become a global best-in-class immunology molecule in the future. Additionally, the company's CD3-based T Cell Engager has shown increasing evidence of applicability in hematological tumors and autoimmune diseases. We believe Canoma has a leading R&D platform in this area.	Jonah Chen
2256 HK	Abbisko	和誉	6.4	8.8	32.5	-79%	153%	n.a	n.a	The company is also actively developing other R&D platforms, such as ADC and small nucleic acids, and expects to advance multiple new molecules into clinical stages by 2026. Currently, the market underestimates Canoma's long-term growth potential.	Jonah Chen
2190 HK	Zylox-Tonbridge	归创通桥	7.4	21.4	30	42%	33%	16.0	12.0	The company's Pimitinib (ABSK021) is expected to launch in the U.S. and China in 2026, and clinical data for key pipelines such as Epagotinib (ABSK011) in major indications like liver and gastric cancers will be read out. Clinical progress in next-generation products targeting KRAS, FGFR resistance mutations, and other targets will continue to validate the company's innovation platform and drive long-term valuation.	Zhen Tan
4502 JP	Takeda	武田药品	9,040.9	5,643.0	6,800	0%	1%	10.7	10.6	Leading domestic neuro/peripheral interventional player, driven by VBP volume gains, Optimed acquisition, and new product launches, we project 35% 3-year CAGR. At 12x 2027 P/E (8.4x ex-cash), valuation is attractive. Target price HKD30 (18x 2027 P/E); see No.1 neuro share by 2026 and overseas upside.	Zhen Tan
										The company's core pipeline assets, Oveporexton, Rusfertide, Zasocitinib, and IBI363, are driving a new product cycle, steering the company back onto a track of steady growth. As cash flow from core businesses remains stable, the ramp-up of new products will gradually offset the upcoming pressure from Entyvio, shifting the company's revenue structure from being driven by mature products to being led by innovative pipelines. This transformation will put Takeda back on a path of sustainable growth.

Auto & auto parts											
175 HK	Geely	吉利汽车	159.9	14.7	34.2	24%	24%	7.2	5.8	Geely offers the most concentrated investment exposure in 2H26, with exports, premiumization and synergy-driven cost reduction all coming through at the same time, making it our top pick in the OEM segment. 1) May sales reached 238k units, up 1.0% yoy and 1.1% qoq, significantly outperforming the industry. Exports reached 85k units, up 183.7% yoy, with export mix rising to 35.8%. 5M26 export mix reached 31.4%, becoming the company's core growth driver. 2) Zeekr drives premiumization, while Galaxy supports mainstream NEV volume growth. The two brands together accounted for 48.9% of total sales in May, and continued mix improvement should support ASP and earnings elasticity. 3) According to the export thematic report, Geely's overseas sales reached 132k units in 4M26, equivalent to 43.4% of its full-year 2025 overseas sales. Its regional exposure is relatively diversified, and its global operating capability is stronger than peers. 4) The rollout of European production and overseas expansion of i-HEV should further open up growth potential.	Yonghuo Liang
1211 HK	BYD	比亚迪股份	673.8	73.9	130	20%	24%	15.4	12.5	Overseas growth and high-end brand ramp-up should help offset domestic competitive pressure, while long-term globalization space remains significant. 1) May sales reached 383k units, broadly flat yoy and up 19.4% qoq, showing a clear recovery. Exports reached 161k units, up 80.4% yoy and 18.9% qoq, accounting for 41.9% of total sales. 5M26 exports reached 617k units, with export mix at 43.9%. 2) Denza, Yangwang and Fangchengbao sold a combined 46.8k units in May, up 63.9% yoy, with Fangchengbao becoming a key driver of mix upgrade. 3) Overseas sales reached 283k units in 4M26, equivalent to 46.1% of full-year 2025 overseas sales, and BYD remains the clear leader in overseas NEV sales. 4) Overseas factories, its self-owned vessel fleet and localized supply chains are strengthening delivery capability and profitability, and overseas targets may still have upside.	Yonghuo Liang
3606 HK	Fuyao glass	福耀玻璃	141.1	54.1	83	11%	16%	10.6	9.1	Fuyao is a global auto glass leader, with a clear overseas expansion and ASP upgrade logic, making it a suitable defensive allocation under weak sector beta. 1) Overseas revenue contribution is high, and its global production capacity and customer coverage help offset demand volatility in any single region. 2) Rising penetration of high-ASP products such as panoramic roofs, HUD glass and smart glass should increase content value per vehicle. 3) Against the backdrop of weak industry recovery and strong export growth, globalized auto-parts supply-chain capability is scarce, supporting strong earnings resilience. 4) Current valuation has entered a relatively attractive range, making Fuyao suitable to be paired with the OEM overseas expansion theme.	Yonghuo Liang

AI Robotics/Autonomous driving											
9880 HK	UBTECH	优必选	37.0	73.5	172	61%	57%	n.a	n.a	The company leads in humanoid robot commercialization. In 2H25, revenue grew 69% yoy and 122% qoq; humanoid robot deliveries reached 1,079 units, generating RMB820mn revenue, while gross margin rose to 38.9% and losses narrowed significantly. Looking ahead, we see three 3Q26 catalysts: 1) industrial humanoid robot volume ramp-up, with the 2026 shipment target for industrial models raised to over 5,000 units. Walker S3 upgrades weight, continuous operation, dexterous manipulation and cost versus prior generations, targeting cumulative cost reduction of over 80% versus S1, and could accelerate adoption in autos, 3C, logistics, semiconductor and other high-end manufacturing scenarios; 2) the consumer-grade full-size hyper-realistic humanoid robot U1 started presales on 2 June and will be officially launched on 30 June. The product is close to human body proportions and features 88 degrees of freedom, over 20 facial micro-expressions and an emotional AI model. JD presale orders have exceeded 5,000 units. If subsequent pricing, delivery and user feedback exceed expectations, U1 could validate C-end service-robot demand and expand the company's growth boundary; 3) the data flywheel continues to build, with embodied-AI data of c.300,000 hours in 2025 and a 2026 target of over 1mn hours, strengthening VLA and multi-robot collaboration capabilities. We believe UBTECH combines B-end industrial delivery capability with C-end consumer product potential. Key 3Q26 watchpoints are Walker S3 customer delivery, U1 official launch and presale conversion, order execution and margin improvement.	Yonghuo Liang
425 HK	Minth Group	敏实集团	27.1	22.9	56	13%	18%	9.0	7.6	The traditional auto-parts business remains a solid earnings buffer. In 2025, revenue and net profit grew 11.2% and 16.1% yoy, respectively; NEV business revenue contribution rose to 53%, overseas revenue continued to expand, and gross/net margins remained stable. Current valuation is still between the historical average 12-month forward PE and -1SD, while PB is ~its historical average, implying that breakthroughs in robotics, AIDC and AI liquid cooling are not yet fully priced in. Looking ahead, we see four 3Q26 catalysts: 1) semiconductor-scenario robots as a new growth driver. Minth has formed a JV with Taiwanese automation leader Mirle, with Minth holding 60%, targeting high-cleanliness and 24/7 production scenarios in wafer fabs, packaging/testing plants and advanced packaging facilities. Wheeled-arm robots and robot dogs could see early adoption in Taiwan's semiconductor supply chain; 2) acceleration in humanoid robot core components. Minth is a core supplier to AgiBot and has partnered with Leader Harmonious Drive on robot joint modules, positioning itself in the North American robot core-component supply chain, with future potential to supply Tesla, Figure AI and other leading customers; 3) potential breakthrough in AIDC. The company has spent over three years developing high-value SOFC/PEMFC fuel-cell components including interconnects, supports and bipolar plates, has secured domestic orders, and is in discussions with overseas customers including Bloom Energy; 4) clear emerging-business targets. Management guides revenue from humanoid robots, AI liquid cooling, eVTOL and other new businesses to grow from c.RMB800mn in 2026 to RMB10bn in 2030, including RMB5bn from humanoid robots. We believe Minth's appeal lies in its stable traditional auto-parts business plus multiple re-rating options from robotics, semiconductor automation, AIDC fuel cells and AI liquid cooling. Key 3Q26 watchpoints are JV progress, robot joint-module customer validation, AIDC overseas orders and emerging-business revenue delivery.	Yonghuo Liang

Consumer											
2319 HK	Mengniu	蒙牛	68.1	17.6	21.5	34%	19%	13.6	11.8	Mengniu's 1H26 results validated the recovery thesis underpinning our May upgrade. The 1H26 beat, marked by 7.8% yoy revenue growth against initial MSD% growth guidance, was almost entirely volume-driven (+8%), which management characterized as “benign” underlying demand rather than a short-term rebound. The strength was also broad-based: liquid milk grew 5.2% yoy ahead of the industry, while fresh milk, milk formula and cheese all delivered 30%+ growth (ex-NZ plant disposal), signaling a structural rebalancing toward faster-growing solid categories. Net profit rose 15.9% yoy, aided by associates swinging to profit (vs. a RMB585mn loss in 1H25) as the raw milk cycle turned - a dynamic we flagged with our upstream channel check. Meanwhile, encouraged by solid July-August.	Joseph Wong
3563 JP	Food & Life Companies	Food & Life Companies	1,176.2	5,067.0	6,700	43%	31%	34.9	26.5	We forecast a 22% 3-year sales CAGR, with that of international compounding at 50% (360+ overseas stores by end-FY9/26E, from 340 at 9M) as China densifies beyond its Southern stronghold and new markets (Malaysia, a New York flagship) layer in, while Japan delivers a steady 6% CAGR on Digiroy driven ticket growth rather than footprint expansion. We model a flattish GPM — rice and seafood inflation offset by menu mix, premium LTOs, and localized overseas sourcing — with operating margin expanding structurally on Digiroy labor savings and the rising mix of the higher-margin international segment.	Joseph Wong
EL US	Estée Lauder	雅诗兰黛	33.3	92.0	127	36%	17%	31.6	26.8	EL closed FY26 with its strongest quarter of the year, delivering 5% organic sales growth in FQ4 with every region and category contributing except hair care. FY organic sales rose 3%, hitting the top end of guidance, while OPM expanded 320bps to 11.2% and diluted EPS grew 66% to USD2.51, well ahead of the initial outlook set last August. The quality of the quarter matters as much as the magnitude: GPM reached 75.5% (+360bps yoy), nearly 400bps above FY24 levels when the PRGP was first announced, and North America returned to organic growth even excluding a one-time gift card benefit. Mainland China remains the standout, with 9% organic growth in FY26 and six consecutive quarters of share gains. Management raised FY27 guidance to above-consensus level, with PRGP savings ramping through the year and the full run-rate landing in FY28E.	Joseph Wong
4911 JP	Shiseido	资生堂	1,304.4	3,261.0	3,860	n.m.	29%	31.6	24.6	We upgraded Shiseido to BUY from HOLD. Our HOLD stance rested on one condition: a sales inflection to complement well-executed restructuring. 2Q delivered it. Underlying sales growth flipped from -3% yoy in 1Q to +2%, with improvement across every segment, while core OP doubled yoy to JPY 31.4bn, a second consecutive quarterly beat, on better SG&A ratios despite COGS drags. Crucially, the beat came from the regions we were most cautious on: China/TR grew profits c.25% on 14% revenue growth, the Americas swung yoy from a JPY 5.8bn loss to JPY 2.0bn profit as the Drunk Elephant inventory reset annualized, and Japan's OPM reached 14.3% (from 11.4%) as inbound declines narrowed on successful diversification toward Thai, Taiwan, and Korean tourists, directly easing the inbound overhang we flagged post-1Q.	Joseph Wong
9633 HK	Nongfu Spring	农夫山泉	444.7	39.5	50	11%	14%	24.6	21.9	Nongfu Spring delivered robust 1H26 results, characterized by solid top line expansion and quality margin enhancement. Total revenue grew 16.0% yoy to RMB 29.7bn, propelled by the high-margin tea beverage segment (+30.1% yoy to RMB 13.1bn). Gross profit rose 17.0% yoy to RMB 18.1bn, with GPM expanding 60 bps to 60.9%, benefiting from a favorable product mix shift, locked-in PET resin costs, and lower raw material procurement expenses (juice, sugar). Operating discipline remained tight: the selling expense ratio remained steady at 19.7%, while the G&A ratio contracted 40 bps to 3.8% on operating leverage. Net margin expanded 50 bps to 30.6%, driving net profit up 16.6% yoy to RMB 8.89bn. Adjusted net margin (ex-FX fluctuations) stood at ~30.4%, up yoy. Nongfu Spring remains a high-quality defensive compounder, backed by category leadership in sugar-free tea, disciplined cost control, and superior earnings visibility across market cycles.	Joseph Wong
