NKY shows resilience at 69,000 — CTAs stay, AI Leadership selection, and European weakness tied to Chinese economy

****Extel Voting Request**** If you would like to recognize our efforts over the past year, please consider supporting **JP Morgan Quantitative Research (FIVE STARS)**

- **The Nikkei Average has rebounded and maintained the 69,000 level. Within the Quality Growth group, Defensive stocks are in the lead, but major semiconductor stocks are retaining their Price Leadership.**
- **CTAs appear to remain bullish as long as the Nikkei Average stays above the 68,400 level. Will the index attempt to recover to the 70,000 level next week?**
- **European bond volatility remains in focus. Factors related to the Chinese economy are also playing a role in Europe's underlying weakness.**

Today (October 9) the Nikkei Average followed the pattern of the previous day's US market, where AI-related stocks lost momentum, and fell sharply to the 68,000 level during the morning session. However, the market rebounded to the 69,000 level in the afternoon session, and significant buying demand was observed during the comeback. In terms of Style, Momentum and High Beta underperformed, but there was no clear reverse rotation in Quality Growth. We think it is rational to view today's correction not as a blanket "risk-off" situation, but rather as one driven by continued technical risk reduction (i.e., profit-taking) following the recent rally.

Of course, within the Quality Growth sector itself, the roles of offense and defense have temporarily reversed. While selling pressure emerged in the Offensive Quality Growth group, which includes semiconductors and tech hardware, the Defensive Quality Growth group, which includes gaming, IP, and software, remained relatively resilient. **Domestic and overseas investors appear to have temporarily reduced their risk amounts in response to the instability of overseas AI stocks, while maintaining the Quality Growth selection criterion. While this does not indicate a complete retreat from an optimistic stance, it gives the impression that market sentiment has shifted away from an exclusively aggressive approach.**

We estimate that dip-buying by systematic investors, such as CTAs, played a role in the Nikkei Average finding a support level at the 68,000 level. Based on our QDS team's real-time estimates, CTAs have contributed to market volatility but have not yet shifted to full-scale risk reduction. Our estimated breakeven point for existing long positions in Nikkei 225 futures is 66,200 (Figure 1). As a guideline, levels above 68,400, which is the Nikkei Average's standard deviation over the past three months (approx. ¥2,200), added to the breakeven point, is still considered within

See page 11 for analyst certification and important disclosures.

the range of a technical uptrend.

If, on the day following the Japanese holiday next week, the situation overseas is such that the Nikkei Average can hold above 68,400, we believe there is potential for a rebound toward the 69,000-71,000 level next week. On the other hand, if the index should fall clearly below 68,000, we think that CTAs are likely to increase their precautionary profit-taking. However, within the 68,000-66,200 range, we would expect not only a reduction in existing long positions but also new buying by systematic players looking to adjust their regional allocations. For example, looking at changes in CTAs' regional equity exposure (most recent one-week timeframe), it seems that CTAs have reduced their exposure to European and Chinese stocks and increased their holdings of Japanese, US, and Taiwanese equities. We believe that the current systematic buying of Japanese stocks is not driven only by simple price trends but also includes a strategy of shifting funds from Europe and China to the US and East Asia.

Figure 1: CTAs' NKY futures positions – As long as the stock price correction holds at the 68,000 level, we expect the unwinding of long positions to be limited and CTAs to maintain a stance of rebuilding positions

Tone of Company News x Momentum positions – The direction of Price Leadership

Supply-demand for cash equities was not as bullish as it was for futures this week. Supply-demand-based sentiment for Japanese stocks remains close to zero, and the bullish and bearish forces remained evenly matched (Figure 3). We believe this is because the tailwind of AI reassessment is being offset by volatile overseas interest rates and high crude oil prices (Figure 4). While AI-related buying on the positive reassessment dominated the first half of the week, concerns over interest rates in developed nations, particularly France, in the middle of the week and rising crude oil prices toward the end of the week dampened market sentiment. At present, the market remains in a "high-turnover" environment, where changes in perceptions about AI, interest rates, and crude oil prices take turns driving the market on a daily basis, making it difficult to gauge the overall trend on the cash-equity side based on a single day's price movements alone.

In such a situation, we see individual stocks, particularly the composition of "Price Leadership" stocks, as becoming more important than the overall index. Therefore, to gauge the future direction of stock price momentum for the top five stocks by cumulative contribution to the Nikkei Average since September 29, we compared the narrative in corporate news coverage (i.e., the percentage of optimistic articles on a company-by-company basis) and the estimated positions of cash-equity momentum investors (Directional Players). Note that the Nikkei Average is a par value weighted index, and its contribution reflects the impact on the index calculation formula rather than market capitalization.

For the top contributors, **Advantest (6857)** and **Tokyo Electron (8035)**, the accumulation of Momentum positions has been coupled with an improvement in media sentiment (Figures 5 and 6). Prices, positions, and narratives are starting to move in the same direction, and relatively strong Momentum is being formed. Tokyo Electron's current stock price (as of 12:00 p.m., the time of this writing) of ¥12,435 is slightly below the estimated breakeven point of ¥12,500. Although positions held by Momentum trading are currently in the "pain" region, they have not yet been unwound. Rather, we think that dip-buying aimed at a recovery to ~12,500 is likely to occur. In contrast, **Recruit Holdings (6098)**, another top-ranked stock, is seeing a weaker improvement in media sentiment relative to its stock price rise, and some momentum traders may be moving to close out their positions. **Even among stocks with similar contribution levels, the semiconductor-related stocks that are in the Offensive Quality Growth group are showing signs of more sustainable stock price gains.**

However, we need to be cautious about the AI stocks included in the lower-ranking stocks, namely **SoftBank Group (9984)** and **Kioxia Holdings (285A)**. Both companies are still recovering from the AI Momentum shock in July, and media coverage remains cautious to neutral (Figures 11 and 12). When overseas AI stocks become volatile, these companies are particularly susceptible to selling pressure because they lack their own optimistic narrative. Kioxia's current stock price of ¥17,565 is significantly below our estimated break-even point of ¥20,836 for Momentum traders, so we believe that selling pressure could persist next week. SoftBank Group's current stock price of ¥5,820 also falls below our estimated break-even point of ¥6,226, although the gap is only about -7%. Momentum traders are still believed to be holding long positions. If SoftBank Group can recover to ~¥6,226 or higher sometime soon, we believe there may be an opportunity for it to return to the Price Leadership group.

Generally speaking, the assessment that AI-related stocks are gaining momentum from a trend perspective remains valid even after today's (October 9) market correction, although the group is not entirely unified. While the narrative and positions appear to be supporting

the stock prices of Advantest and Tokyo Electron, it does not seem that investor confidence has yet fully solidified for SoftBank Group and Kioxia. If strong price leadership, even from a limited number of stocks, can be maintained, we think it will provide support for the Nikkei Average. However, if even that group of stocks were to falter, we believe the index's narrow breadth would likely surface as a weakness.

Has the unrest in the French government bond market peaked? European uncertainties and the Chinese economy

Finally, in the Tokyo market today, the tension surrounding overseas interest rates appears to have receded somewhat. For example, the EUR/JPY rate, which tends to reflect the degree of uncertainty in Europe, did not fall below our estimated break-even point for CTA long positions (~¥176.8) and rebounded to the ¥177 level. The USD/JPY rate also rose to ¥158.1, and CTAs are beginning to resume selling the yen (i.e., buying the US dollar) (Figure 15). **At least for now, it appears that concerns about a widespread unwinding of yen carry trades triggered by credit market anxiety have eased. This also seems to be one of the factors behind the Nikkei Average's rebound from its morning session lows.**

However, the French government bond market remains highly volatile (Figure 16). Although systematic traders are covering some of their short positions in French government bond futures, selling by fundamental investors does not appear to have subsided. Based on our QDS team's estimates, the French 10-year bond yield of 4.89% (as of October 8) is approximately 50bps higher than the level implied by speculative positions (Figure 17). Until we can confirm a decline in volatility in the French government bond market and a drop in that yield of ~50bps, it will be difficult to exclude European interest rates from the list of major risk factors.

Furthermore, we believe that interest rates alone do not fully explain the concurrent weakness in European equities. Looking at CTAs' positions by region, while they have maintained short bond and long equity positions in Japan and the US, there has been a rapid reduction in long equity positions in France, and similar trends are seen in Germany and Australia (Figure 18). **These regions share the commonality of being highly sensitive to the Chinese economy through exports of resources, consumer goods, and capital goods. If Europe's fiscal and interest rate instability is a surface-level factor, the slowdown in China's employment, consumption, and economic momentum may be the underlying factors that weaken the stock market's resilience to rising interest rates** (Figures 19 and 20).

For the time being, we will need to pay attention to whether the Nikkei Average remains at the 69,000 level even over Japan's three-day weekend as well as next week, while also focusing on the recovery of Price Leadership momentum among such as Advantest and Tokyo Electron. If the buying mood for these AI semiconductor stocks does not deteriorate, we believe the Nikkei Average will likely recover to the 69,000-71,000 range. On the other hand, if volatility in French bonds remains high and the Chinese market weakens after its extended holiday, there is a lingering risk that European instability could resurface as a global economic and credit concern, moving beyond a region-specific issue. When assessing Japanese stocks, we think the key focus regarding European interest rates will be not only the stabilization of those rates but also the confirmation of China's economic health, and whether Japan's Offensive Quality Growth group can once again take the lead.

Analyst Certification: The Research Analyst(s) denoted by an "AC" on the cover of this report certifies (or, where multiple Research Analysts are primarily responsible for this report, the Research Analyst denoted by an "AC" on the cover or within the document individually certifies, with respect to each security or issuer that the Research Analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect the Research Analyst's personal views about any and all of the subject securities or issuers; and (2) no part of any of the Research Analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the Research Analyst(s) in this report. For all Korea-based Research Analysts listed on the front cover, if applicable, they also certify, as per KOFIA requirements, that the Research Analyst's analysis was made in good faith and that the views reflect the Research Analyst's own opinion, without undue influence or intervention.

All authors named within this report are Research Analysts who produce independent research unless otherwise specified. In Europe, Sector Specialists (Sales and Trading) may be shown on this report as contacts but are not authors of the report or part of the Research Department.

Important Disclosures

Company-Specific Disclosures: J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan–covered companies, and certain non-covered companies, by visiting https://www.jpmm.com/research/disclosures, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, https://www.jpmorganmarkets.com.

J.P. Morgan Equity Research Ratings Distribution, as of October 03, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	35%	12%
IB clients**	83%	81%	72%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	93%	88%

***Please note that the percentages may not add to 100% because of rounding.**
****Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.**
For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://www.jpmorganmarkets.com. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:
A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of http://www.jpmorganmarkets.com where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to UK MIFID Research Unbundling exemption for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Digital assets, which may also be referred to as virtual or crypto assets or crypto currencies (e.g. bitcoin), discussed in this research report are subject to a rapidly changing regulatory landscape. The application of relevant laws in respect of such assets may be unsettled, and the legality of any digital asset investment may be unclear. Prior to making any investment decision regarding any digital asset, investors should seek their own legal advice and be aware of any legal considerations regarding the purchase, holding or selling of such an investment. For relevant regulatory advisories on digital assets, including bitcoin and ethereum, please see https://www.jpmorgan.com/disclosures/cryptoasset-disclosure.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit https://www.theocc.com/components/docs/riskstoc.pdf for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Notification for Credit Ratings: If this material includes credit ratings, such credit ratings provided by Japan Credit Rating Agency, Ltd. (JCR) and Rating and Investment Information, Inc. (R&I), are credit ratings provided by Registered Credit Rating Agencies (credit rating agencies registered under the Financial Instruments and Exchange Law of Japan (FIEL)). With respect to credit ratings that are provided by credit rating agencies other than JCR and R&I and have no stipulation that such credit ratings are provided by Registered Credit Rating Agencies, this means that such credit ratings are Non Registered Ratings (credit ratings provided by credit rating agencies not registered under the FIEL). Among the Non Registered Ratings, with respect to those credit ratings provided by S&P Global Ratings (S&P), Moody's Investors Service (Moody's), or Fitch Ratings (Fitch), prior to making investment decision based on such Non Registered Ratings, please carefully read the "Explanation Letter regarding Non Registered Ratings" for the corresponding credit rating agency, which we separately have sent or will send.

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its
