USD supports still intact - watching near-term risks to the view

Do you expect the French National Assembly to pass the vote on the revenue section of the 2027 State Budget Bill scheduled on 20 October? How do you expect EUR/USD in the one session after the vote?

1. *Yes, EUR/USD higher by more than 1%*
2. *Yes, EUR/USD higher by 0-1%*
3. *No, EUR/USD lower by 0-1%*
4. *No, EUR/USD lower by more than 1%*

- There still looks to be limited reasons for a reprieve in the recent USD strength. Still elevated oil/energy prices, bond market pressures and a relatively strong US equity performance. We highlight near-term supports and risks to the view.
- **Asia FX**: We maintain a high conviction level of 4/5 on our long SGD/IDR, with SGD likely to be supported by MAS FX policy tightening on 14 October. We remain long CNH versus an abridged CFETS basket and long USD/THB (both at 3/5).
- **G10 FX:** Our key trades are long USD/CAD (target: 1.44, conviction level 4/5), short NOK/SEK (1.00, 3/5) and short GBP/AUD (1.80, 3/5). Any deterioration in market risk sentiment from the French fiscal situation is likely to weigh on EUR/JPY, also supported by Japanese investors' bond flows and a FX hedge flow perspective.
- **Asia rates:** We maintain a relatively high conviction level of 4/5 in receive Mar-5y Korea NDIRS, and reduce the conviction level on our pay Dec-5y SORA to 3/5 from 4/5. In India, we shifted our receive to Dec-5y NDOIS (from Sep27-1y) after this week's RBI meeting, and kept the conviction level at 3/5.

Fig. 1: Top five top conviction strategy trades in order (scale 1-5)

VX:FCCNN88

We maintain our broad bias towards a stronger USD (*shifting in this direction since 11 September*) in the near term, but not with a very high conviction. We elaborate in more detail below, but underlying issues have not changed much from still elevated oil/energy prices and risks, bond market pressures remaining in France and the US, relatively strong US equity outperformance and strong portfolio inflows into the US. There are a few near-term positive USD events/risks from expected strong US bank earnings, EU-China trade discussions; Israel/Middle East risks given the election calendar and Trump tariffs – possibly on Korea. But there are some uncertainties in the week ahead from US macro data (CPI, PPI, and retail sales), while there has also been some headline positive French fiscal news and RMB appreciation.

The near-term USD supports remain in place:

1. **Elevated oil/energy prices with still little likelihood of the Middle East conflict being resolved.** Trump said (9 October) that the US would not attack Iran any time prior to the midterm elections (3 November), but the concerns remain after the midterms with previous reports suggesting a resumption of military action after the elections. The other risk is Israeli parliamentary elections (27 October) and whether there is my increased military escalation with Iran ahead of this. From the Iran/Houthis side, there are limited signs of any change in views/reduced attacks. Iranian media highlight that Iran will not give up its right to uranium enrichment, Iran has attacked tankers in the Strait of Hormuz and the Houthis have continued to attack Saudi Arabia. The risk is whether there is a TACO in the near-term, but our Nomura Market Stress Indicator (NOMUMSI) currently suggests there is limited financial market/energy price stress for that to happen imminently.
2. **Bond yields remain high in some global markets.** 10Y UST yields remain elevated at ~5.23% despite recent support, including the strong 30Y auction (8 October), Trump comments on holding off on Iran attacks for now and the slight softening in US equities. However, without a change in the elevated energy price backdrop, the relative strength of the US economy, the Fed not stepping up its rate hike aggressiveness (October FOMC hike looks highly unlikely), long-end US yields may continue to face upward pressure, with risks of non-linear moves from options positioning and/or MBS convexity hedging. As US financial conditions remain stable (limited credit/banking sector stress), the risk of imminent action from the US authorities also remains low. Even US Treasury Bessent (4 October) noted he cannot control the bond market and there was no idiosyncratic move higher in US yields.

   Similar relaxed comments from the ECB's Moulin (7 Oct) on French bond yields suggest there is also still some distance from ECB support. Moulin noted that conditions in France do not warrant ECB intervention (10Y OAT-bund spread last around +139bp) and also said that the ECB was not there to respond to countries' budgetary problems.

   The risk of more pressure on European rate markets could emerge from the US, while market participants are also watching out for any political dissent against France's fiscal consolidation plans (5% budget deficit in 2027; 5.4% in 2026). Even though Le Pen (RN Party) is in favour of fiscal consolidation (even more aggressive – though unclear on how that will be achieved), it is unclear whether she supports the government's proposed budget plans. Key dates of focus are 20 and 27 October, dates for votes on the government's proposed revenue and social security elements of the bill (before the 17-18 November budget vote). Pushback from the opposition would intensify fiscal concerns in France and weigh on the EUR.
3. **US equity outperformance and inflows continue.** Since September 2026 to date, US equities (S&P) have broadly outperformed (+1.8%) despite the rise in long-end yields (10Y UST +43bp in the same period). This has been supported by the view that the US tech sector is less affected because of strong cash surpluses and earnings. However, even looking at S&P excluding the information technology and telecom services sectors, the fall has only been marginal at 2.5% (same period). This compares with the 4.5% and 6.9% fall in the DAX and CAC indices respectively, and the rise in 10Y German Bund and 10Y French OATs by 15bp and 69bp, respectively over the same period.

   Other measures of foreign equity inflows into the US (ETF and mutual fund flows) have

知识星球：前沿信息收录
更多一手投研资料扫码加微信
知识星球：前沿信息收录
VX:FCCNN88

also remained strong with the week to 8 October data having the strongest weekly inflow since 3 September. The week by itself is also not too far from the inflows for the whole month of September. In the week ahead expected strong US bank earnings (13 October) including JPM Chase, Goldman, Citibank, Wells Fargo, and BoFA (14 October) could keep positive sentiment on US equity markets.

Other events of focus in the near term include: September core CPI (due 14 October; consensus at 0.2%, but large minority at 0.3% m-o-m). With Fed pricing currently around +5bp for an October FOMC hike, there would likely need to be an outturn of 0.4% m-o-m to raise Fed pricing to over a 50% likelihood of a hike in October. A result below this would likely support recent Fed comments (especially Waller and Williams) that the Fed can wait a meeting to judge whether further hikes are needed. We believe an outcome of less than 0.1% m-o-m might result in the market not just almost completely ruling out an October rate hike, but also reduce December 2026 pricing to a closer call (currently 25bp hike is fully priced). The other US data of focus will be on 15 October, with the release of September retail sales and PPI.

Watch the 15-16 October EU-China trade discussions - same dates as the EU Leaders' Summit. There has been an hardening stance against China, with the EU warning that it will resort to unilateral trade restrictions, such as import quotas and tariffs on China EVs and also focus on China chemical imports. Without the EU refraining from escalation, we believe China is prepared to retaliate on EU actions, which will only add to negative EUR sentiment. If the EU does not escalate and/or there is some agreement, we believe this will provide marginal support for EUR and RMB. Europe has accused China of a weak RMB (both Macron and Merz), while China (8 October) noted that it has no need to gain a competitive edge through devaluing, and trade had become significantly less sensitive to the RMB as the country has climbed up the value chain.

On tariffs, Korea could be at risk from the US administration, with Trump noting a possible 'doubling' of Korea's tariffs to 30% if it continues to push back against investing USD54bn into an Alaska LNG project. Trump is expected to visit Alaska on 16 October (one of the swing states) and is likely to desire to go with some economic/political win.

On strategy, our three higher conviction trades are long USD/CAD, long SGD/IDR and receive H27-5Y Korea NDIRS (all at 4/5 convictions). We continue to hold our long CNH basket and long USD/THB recommendations (3/5 convictions) in Asia FX. In G10 FX, we remain short NOK/SEK and short GBP/AUD (both convictions at 3/5). In Asia rates, we remain received Dec-5Y India NDOIS (conviction 3/5).

Asia FX strategy

We **maintain a high conviction level of 4/5 on our long SGD/IDR position**, still targeting 14,440 (~4% gains) by end-November. In **Indonesia**, USD/IDR remained stable over the past week, even as broad USD, oil prices and US yields have remained supported. A few positive headlines may have supported near-term sentiment on IDR, including FTSE Russell reaffirming the emerging market status of Indonesian equities (*FTSE Russell* , 6 October) and Indonesia's Constitutional Court dismissing a bid to unseat Vice President Gibran on a technical basis (*Bloomberg* , 7 October). Nonetheless, we believe several global and local factors will continue to weigh heavily on the IDR, including: 1) **local political and policy developments are a drag on Indonesia BOP dynamics**. Even though the Constitutional Court dismissed the bid to unseat VP Gibran, its ruling leaves open the channel for parliament to initiate impeachment of Gibran (*Bloomberg* , 7 October). Similar to the recent replacement of ex-Finance Minister Purbaya, power politics and differences with Prabowo's loyalists (*Bloomberg* , 16 September) may be the overriding factor for personnel changes. Separately, parliament also approved (*Bloomberg* , 8 October) a new labour law that increases severance pay for dismissed workers and makes layoffs harder, efficiently rolling back some of the business-friendly reforms from the Job Creation Law introduced in 2020. Along with policy developments, such as the creation of the DSI, the strengthening of the FX export proceeds repatriation rule for natural resource exports and the government's de-regulation policy framework, Indonesia's still-evolving policy environment is likely to add to uncertainty, which is a *headwind for FDI* ; 2) **elevated US and DM yields, with an increased market focus on France fiscal and political outlook**. The recent selloff in US Treasurys led the 10y IndoGB-UST yield spread to narrow from a high of 3.0% on 11 June (i.e., soon after BI's

知识星球：前沿信息收录
VX:FCCNN88

off-cycle 25bp rate hike on 9 June) to ~1.9% currently, making it less attractive to foreign investors to hold on to IndoGBs; 3) **BI continues to purchase government bonds**. Since our *last update* (i.e., data up to 29 September), BI's gross holdings of government securities (i.e., not accounting for securities used in monetary operations) increased by another IDR8.1trn (USD452mn; data to 7 October). This could have suppressed IndoGB yields and contributed to the narrower IndoGB-UST yield spreads; 4) even though FTSE Russell reaffirmed the emerging market status of Indonesian equities, **the statement said that it will continue to assess the effectiveness of recently implemented reform measures**. The market generally views a downgrade to frontier market as a low probability event, and therefore this development is not necessarily a positive for Indonesian equities. Limited data so far, but outflows from Indonesia equities have continued since FTSE Russell's announcement on 6 October; 5) **next event to watch is MSCI's November 2026 Index Review after the US market close of 11 November**. MSCI said (*MSCI*, 23 June) it needs to see sufficient progress on Indonesia's recent transparency reforms by the time of the November 2026 MSCI Index Review. Otherwise, MSCI "*will consider a range of options for the appropriate treatment for the Indonesia market, potentially including a consultation on the reclassification of Indonesia from Emerging Markets to Frontier Markets*" (*MSCI*, 23 June); and 6) **the confluence of potential credit rating downgrades by Moody's and Fitch, market concerns over fiscal outlooks and BI independence**, a widening basic balance deficit and BI's already-low FX reserve adequacy ratio also cause a **significant risk of portfolio outflows** and IDR instability in the coming months. We note that Indonesia's fiscal deficit widened by IDR79trn in September to IDR319trn, as total expenditure rose to 32.9% y-o-y from 10.7%, driven by central government spending.

In **Singapore**, we continue to have a **positive view on SGD outperformance** amid robust local fundamentals, supported by the current 1.25% annualised S$NEER appreciation slope and the potential for the MAS to tighten further. The key focus will be the MAS October policy announcement on 14 October, 8am SGT. We expect the MAS to **tighten its FX policy again, with a greater likelihood assigned to a "slight" increase (i.e., 0.50pp to 1.75%) in the slope of the of S$NEER policy band** versus a "very slight" increase (i.e., 0.25pp to 1.50%). With the MAS noting that "risks to the inflation outlook remain tilted to the upside" (*MAS CPI statement*, 23 September) and amid Singapore's strong economic momentum that **raises the risk of demand-pull inflationary pressures**, we believe the MAS will take a more decisive stance to address the pipeline inflationary pressures. Our economics team expects the **advance estimate of Q3 GDP growth to remain strong at 5.6% y-o-y** (released at the same time as the MAS policy statement), and above the official forecast range of 4.5%-5.5% for 2026. From now until the October policy announcement, external developments surrounding the AI/tech sector and global financial conditions will likely be the key determinants of the extent of the MAS' S$NEER slope increase.

In **China**, we maintain the conviction level on our long CNH versus a 6-FX abridged CFETS basket (i.e., USD 30%, EUR 29%, JPY 13%, KRW 13%, AUD 9%, THB 6%) at 3/5, targeting ~3% gains by end-November. Globally, we believe RMB is still in a conducive environment (i.e., USD bid) to outperform its trading partners' currencies (see above). Locally, we see CNH outperformance for the following factors: 1) **the daily USD/CNY fixing continues to grind lower despite the USD bid environment**. In the first session right after the week-long China National Day holidays on 8 October, USD/CNY fixing was higher only by 16pips despite the USD bid environment through the holidays (i.e., DXY stronger by 0.78% over this period). After that, the fixing moved lower by 37pips today to reach a new year-to-date low of 6.7330. Positive fixing error (i.e., actual fixing minus our model projection) also remained somewhat stable at an average of 231pips over the past two sessions; 2) the **PBoC released a document on its view on the RMB exchange rate (on 8 October 2026), which downplayed market concerns that RMB appreciation could erode exporters' profit margins**. In the document, the PBoC was chiefly pushing back against the view that the Chinese authorities resort to currency devaluation to gain competitive advantage. The PBoC also argued that China's trade growth has been driven by its industrial competitiveness, and empirical evidence does not show that past RMB appreciation had adversely affected China's trade expansion. One interpretation could be that the PBoC is becoming increasingly confident that exporters' profit margins will not be adversely affected by RMB appreciation, and the authorities might be comfortable with the current pace of RMB appreciation. PBoC Deputy Governor Lu Lei also previously commented that "China has neither the need nor the

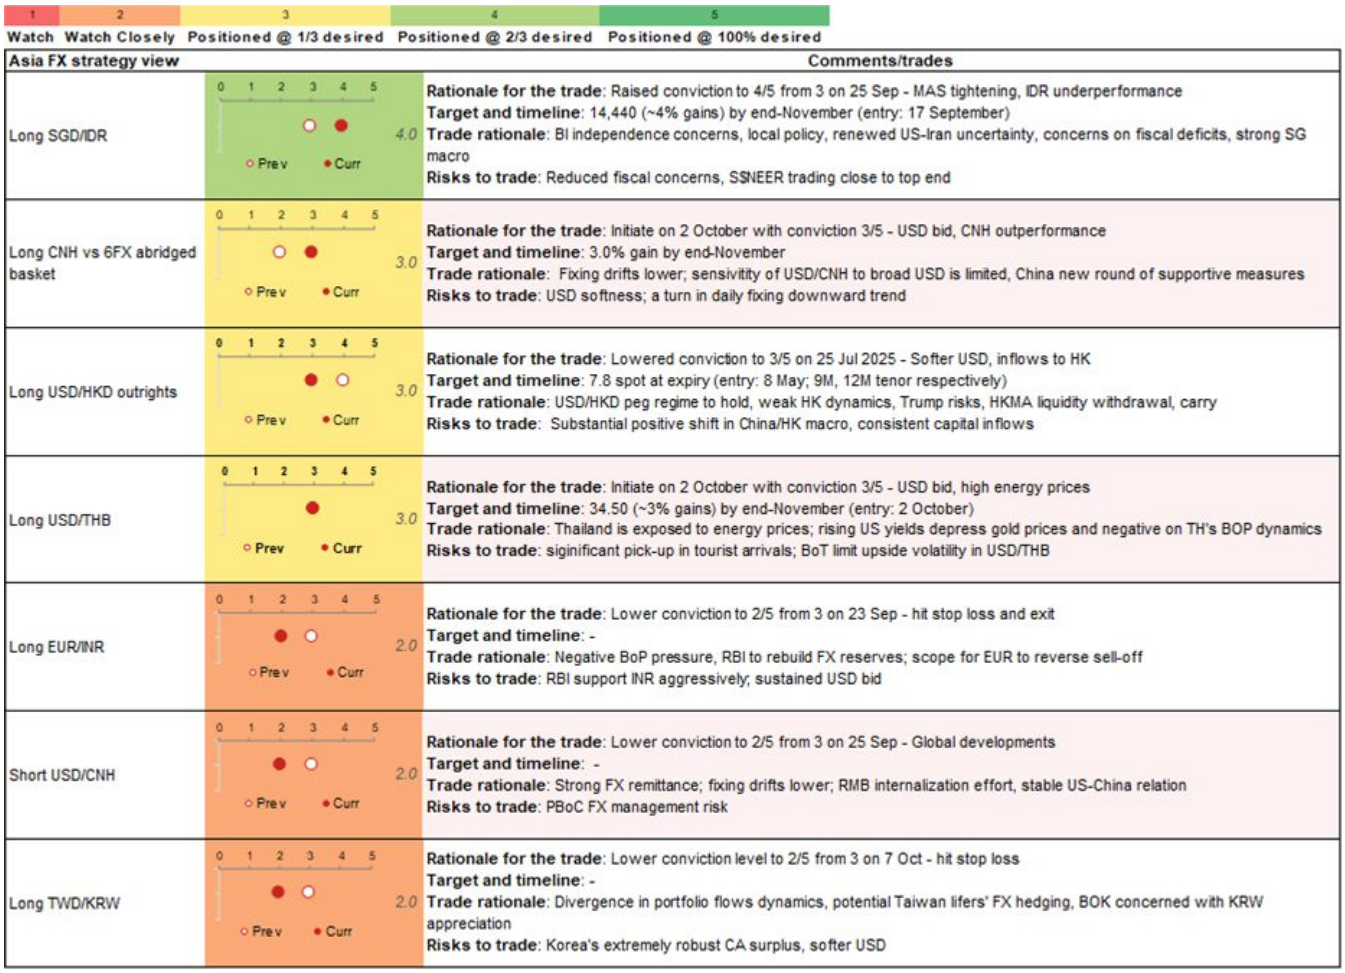

知识星球：前沿信息收录
更多一手投研资料扫码加微信
知识星球：前沿信息收录
VX:FCCNN88

intention to gain a trade advantage through currency depreciation... the increased use of exchange rate hedging tools by corporates and rising share of RMB in trade settlement have further reduced the sensitivity [to exchange rate fluctuations]" (*PBoC*, 10 September). Separately, the PBoC said (*PBoC*, 8 October) that it will begin reporting FX operation data to IMF in 2027; watch **China September trade data** (14 October); and 3) **in a USD bid environment, CNH should outperform the CFETS basket**. While DXY is up by ~0.5% in October MTD, CNH strengthened against the CFETS basket by 0.39%, while USD/CNH remained relatively stable (i.e., -0.1% in the same period).

In **Thailand**, we maintain the conviction level on our **long USD/THB position** at 3/5, targeting 34.5 (~3% gains) by end-November. Over the past week, spot USD/THB has failed to break decisively above the 33.7 levels even though broad USD, oil prices and US yields have remained supported. Nonetheless, we continue to see rationale for spot USD/THB to trade higher in the near-term owing to: 1) **elevated energy prices are a strain on Thailand's fiscal position**. The elevated energy price shock shows few signs of significant easing (see above), which should disproportionately weigh on Thailand, due to its *high net energy imports* and concentration risk with the Middle East. Besides having a negative impact on the trade balance, fiscal concerns are also rising with Thailand's State Oil Fuel Fund facing a severe liquidity crisis. The State Oil Fuel Fund currently runs a deficit of ~THB100bn, almost doubled from ~THB57bn in mid-June 2026 (*Bloomberg*, 16 June 2026). The Thai government may reduce the energy subsidy and allow the local retail oil price to adjust higher slightly, but if pressures continue they would have to consider other fiscal options, including utilising a tranche of the borrowing decree already designated for domestic investment; 2) **BOT Governor Vitai struck a dovish tone**, and suggested there is no rush to raise rates. The governor maintained the BOT's 2026 GDP growth forecast at 2.3% and expects headline inflation to ease to 2% this year, down from the 2.8% forecast in June (*Bloomberg*, 8 October). Our economics team *expects* the BOT to leave its policy rate unchanged at 1.00% through 2026 and 2027; 3) **we continue to see risk of the broad USD bid** (see above) **feeding through to higher USD/THB**. Based on weekly returns over the past 12 months, USD/THB has the second highest beta to DXY (after USD/KRW), and the third highest correlation to DXY (after USD/SGD and USD/CNH) within AeJ. We believe USD/THB will remain sensitive to broad USD bid; 4) **rising US yields depress gold prices, which may have a negative impact on THB**. While we have shown that DXY may be a more significant driver of THB than gold prices, *CTAs in the US/European* time zone have likely built their THB models based on gold prices. Because of the weakness in gold prices, we believe there is a risk that CTAs might start selling THB; and 5) **Thailand's capital flow dynamics appear anaemic**. October MTD, foreign investors net sold USD410mn of Thai equities, while foreign bond inflows of USD129mn so far appear tentative. Local holdings of foreign currency deposits also rose in July and August by USD1.2bn and USD0.4bn, respectively. **Key risks to watch** are: a) foreign tourist arrivals, which only pick up more significantly in December and January; and b) the BOT limiting upside volatility in USD/THB. However, USD/THB still traded higher by ~2.0% in the four weeks to 2 October, despite the BOT net selling USD4.9bn in FX reserves (spot and forwards).

VX:FCCNN88

Fig. 2: Our views on Asia FX

Asia FX strategy view		Comments/trades
Long SGD/IDR	4.0	**Rationale for the trade**: Raised conviction to 4/5 from 3 on 25 Sep - MAS tightening, IDR underperformance **Target and timeline**: 14,440 (~4% gains) by end-November (entry: 17 September) **Trade rationale**: BI independence concerns, local policy, renewed US-Iran uncertainty, concerns on fiscal deficits, strong SG macro **Risks to trade**: Reduced fiscal concerns, SSNEER trading close to top end
Long CNH vs 6FX abridged basket	3.0	**Rationale for the trade**: Initiate on 2 October with conviction 3/5 - USD bid, CNH outperformance **Target and timeline**: 3.0% gain by end-November **Trade rationale**: Fixing drifts lower; sensivitity of USD/CNH to broad USD is limited, China new round of supportive measures **Risks to trade**: USD softness; a turn in daily fixing downward trend
Long USD/HKD outrights	3.0	**Rationale for the trade**: Lowered conviction to 3/5 on 25 Jul 2025 - Softer USD, inflows to HK **Target and timeline**: 7.8 spot at expiry (entry: 8 May; 9M, 12M tenor respectively) **Trade rationale**: USD/HKD peg regime to hold, weak HK dynamics, Trump risks, HKMA liquidity withdrawal, carry **Risks to trade**: Substantial positive shift in China/HK macro, consistent capital inflows
Long USD/THB	3.0	**Rationale for the trade**: Initiate on 2 October with conviction 3/5 - USD bid, high energy prices **Target and timeline**: 34.50 (~3% gains) by end-November (entry: 2 October) **Trade rationale**: Thailand is exposed to energy prices; rising US yields depress gold prices and negative on TH's BOP dynamics **Risks to trade**: siginificant pick-up in tourist arrivals; BoT limit upside volatility in USD/THB
Long EUR/INR	2.0	**Rationale for the trade**: Lower conviction to 2/5 from 3 on 23 Sep - hit stop loss and exit **Target and timeline**: - **Trade rationale**: Negative BoP pressure, RBI to rebuild FX reserves; scope for EUR to reverse sell-off **Risks to trade**: RBI support INR aggressively; sustained USD bid
Short USD/CNH	2.0	**Rationale for the trade**: Lower conviction to 2/5 from 3 on 25 Sep - Global developments **Target and timeline**: - **Trade rationale**: Strong FX remittance; fixing drifts lower; RMB internalization effort, stable US-China relation **Risks to trade**: PBoC FX management risk
Long TWD/KRW	2.0	**Rationale for the trade**: Lower conviction level to 2/5 from 3 on 7 Oct - hit stop loss **Target and timeline**: - **Trade rationale**: Divergence in portfolio flows dynamics, potential Taiwan lifers' FX hedging, BOK concerned with KRW appreciation **Risks to trade**: Korea's extremely robust CA surplus, softer USD

Note: Conviction scale: 1 – Watch; 2 – Watch Closely; 3 - Positioned @ 1/3 desired; 4 – Positioned @ 2/3 desired; 5 – Positioned @ 100% desired.

G10 FX strategy

EUR: French budget concerns dominate and raise questions on ECB's hiking cycle

EUR stabilised a little in the last week, as the French OAT sell-off calmed and the 10yr OAT-Bund spread narrowed from a wide of close to 160bp to just under 140bp. EUR/USD's movements in the last few weeks have been aligned with other markets (OAT-bund spreads and front-end rate differentials), suggesting limited directional opportunity to trade EUR without a clear view on what happens in rates. For now, the statement from Marine Le Pen that her RN party would not draw up any major "red lines" against the government's budget suggests that the base case should be that the budget passes with only modest adjustments. In isolation, we think this would propel EUR/USD back above 1.13 assuming the 10yr OAT-Bund spread narrowed back towards 100bp. The risk scenario – that the budget fails and the government falls – would likely see spreads widen more significantly and should see EUR/USD break below 1.10, in our view. The key dates ahead are 20 October and 27 October, provisional dates for votes on the revenue and social security elements of the bill, ahead of the likely 17-18 November vote on the full budget. Positioning in EUR is short, in our view, in a consistent but not extreme way across various measures. In our view, a further worsening of local dynamics might be best expressed via short EUR/JPY positions, which would benefit from potential "risk off" dynamics and potential FX hedging of euro are bond positioning by Japanese investors. On the other side, the best reversal play would be EUR/CHF upside, which has diverged most notably from rate spreads in the last week.

Short GBP/AUD fundamentals are intact, but slow to play out

Movements in EUR and French bonds around the budget announcement last week provided a notable warning sign for GBP ahead of the UK budget on 28 October. [illegible]llor Healey and his team are clearly aware of these risks and are unlikely to do

知识星球：前沿信息收录
更多一手投研资料扫码加微信
知识星球：前沿信息收录
VX:FCCNN88

anything to negatively shock the market with a narrowing in fiscal headroom appearing likely (from GBP24bn to GBP10-15bn expected) but with a clear focus on fiscal sustainability. One concern we have is whether the government announces more significant use of Public Financial Institutions to issue debt, effectively "off balance sheet", which could create supply concerns and weigh on fiscal credibility somewhat. That said, the bigger impact is likely to be through a tightening fiscal backdrop with higher taxes weighing on growth ahead, providing less acute downside pressure for GBP. In Australia there will be plenty of focus on the labour market data for September. The RBA has suggested it does see the labour market as relatively tight, despite the gradual trend higher in the unemployment rate. Firm data, alongside recently consumer inflation expectations – which jumped back above 5% y-o-y – could see a little more risk premium priced in for the November rate decision, even if policymakers have suggested that recently firmer inflation data could be considered backward looking.

Short NOK/SEK: No major developments but a limited reaction to higher energy prices should bode well for this trade

We opened a short NOK/SEK trade last week with the view that the pair had become a bit less sensitive to energy prices and could be affected more by local factors. Interestingly, the pair has moved broadly sideways since we opened the trade, despite oil prices rebounding back to around USD105/bbl (Brent crude). Of course, a significant escalation and price spike would still be a challenge for the trade, but lower sensitivity is an important factor in our thinking. From a domestic perspective, Riksbank Governor Thedeen flagged "strong reasons" (Bloomberg) to raise rates, with recent activity data coming in strong, albeit with limited signs of an imminent pick up in inflation. Although the start of the tightening cycle is well priced in, SEK has room to catch up with rates pricing in our view. A similar pattern played out in NZD earlier this year, when RBNZ hikes were highly expected in the rates market, but NZD still rallied when the tightening cycle started. We think SEK can follow a similar path. We also think Norges Bank FX purchases should offset NOK strength and look for seasonal patterns to support SEK over NOK in November and December.

Hold long USD/CAD with a high conviction level into September's Canada jobs report

The pair's key driver is still the US-Canada rate differential, and the market finally waving a white flag for a Fed October hike has reduced the USD buying pressure. However, the fiscal situation in France remains a drag on EUR/USD, holding USD/CAD above 1.42. The near-term key event for Canada is the September jobs report, where the market consensus is a modest rebound to 10k (was -41.7k in the previous month) and a moderate uptick in the unemployment rate by 0.1pp to 6.5%. Other related indicators also show no strong improvements in the labor market, thus unless we have a significant positive surprise, we believe this upcoming jobs report will not be a major catalyst for the market to flip to long CAD. We also acknowledge a Nanos Research Group poll for Bloomberg News (conducted from 2-29 September) showing 54% of respondents expecting annual inflation to be above 3% one year from now, which could further tilt the Bank of Canada to consider re-hiking is policy rate in the near future. However, with no strong signs of energy inflation spreading to other inflation categories outside "transport" and the recent uptick in inflation driven by "recreation services", which appears to be temporary, we continue to judge the market's BoC rate hike pricing as aggressive with no strong reason for the market to turn bullish on the loonie. Therefore, we retain our long USD/CAD trade, targeting 1.44 by end-November, with a conviction level of 4/5.

USD/JPY continues its sideways move, but we consider the risk is skewed to the downside

USD/JPY traded around 158 this week, while lacking direction from both sides. There have been no major developments in Japan re-encouraging the market to pay the October BOJ OIS, as: a) the BOJ's Branch Managers' Meeting report for September did not provide any evidence that the BOJ will soon become seriously concerned about its being behind the curve risk, b) both monthly wage data and the BOJ's core CPI measures, both for August, have remained largely flat from the previous month, and c) the household expenditure survey in August was soft, which could keep two dovish BOJ policy board members cautious about additional rate hikes. Nevertheless, all these factors are unlikely to alter the BOJ's thinking about delivering its next hike in December, in our view, and so this should discourage the market from selling JPY strongly. On top of this, the

知识星球：前沿信息收录
VX:FCCNN88

fiscal/political situation in France and the market's nervousness about US tech stocks should weigh on JPY-crosses. We consider USD/JPY will stay within the 155-160 range for the time being, but the direction of its travel should be to its downside, considering the BOJ's continued rate hikes and the Takaichi government becoming less vocal about its fiscally expansionary stance. However, for the fiscal side, domestic investors likely favour confirmation of actual evidence that the government has become less reflationary, instead of a mere change in rhetoric from key ministers. In this regard, whether the government can gain market credibility to deliver solid funding source for its consumption tax reduction policy will be key. We won't have a fixed date for voting yet, but in the meantime, positive developments on the "Japanese DOGE" program to cut expenditures should be an important catalyst for the market to affirm the government's fiscal responsibility. For next week's events, BOJ Koeda is speaking on Thursday, with another G20 Finance Ministers' and Central Bank Governors' meeting, where we could see strong verbal FX interventions from the US and Japan, if USD/JPY trades closer to 160.

Fig. 3: Our views on G10 FX

1 Watch	2 Watch Closely	3 Positioned @ 1/3 desired	4 Positioned @ 2/3 desired	5 Positioned @ 100% desired

G10 FX strategy view		Comments/trades
Long USD/CAD	0 1 2 3 4 5 ○ Prev ● Curr 4	**Rationale for the latest conviction change**: Increased the conviction level to 4/5 on 29 September. **Target and timeline**: 1.44 by end-November (entry: 1.3985, stop: 1.4150) **Trade rationale**: 1) US-Canada rate differentials countinue to support further upside, 2) flow data don't suggest repatriation, 3) our position data indicate light short CAD position **Risks to trade**: US data downside miss, positive developments in US-Canada releationship, strong recovery in the market risk sentiment
Short GBP/AUD	0 1 2 3 4 5 ● Prev ○ Curr 3	**Rationale for the latest conviction change**: Lowering the conviction level to 3/5 on 29 September **Target and timeline**: 1.80 by end-October (c4.2% from entry at 1.8785) **Trade rationale**: BoE hiking cycle looks over priced, political and fiscal risks larger in UK, carry and commodities favour AUD **Risks to trade**: Acute risk off move would likely hurt AUD more than GBP, UK wage/inflation data could surprise to the hawkish side
Short NOK/SEK	0 1 2 3 4 5 ○ Prev ● Curr 3	**Rationale for the latest conviction change**: Entering trade on 2 October at conviction level 3/5 **Target and timeline**: Targeting 1.00 by December **Trade rationale**: 1) FX remains elevated relative to rate differential level; 2) energy price stabilization even amid geopolitical tensions, 3) Norges Bank's persistent FX purchases **Risks to trade**: Market focuses on the high cost of carry, energy price shock, weak data from Sweden side
Long EUR/USD	0 1 2 3 4 5 ○ Prev ● Curr 2	**Rationale for the latest conviction change**: Closed the trade on 14 September, and lower the conviction level to 2/5. **Target and timeline**: - **Trade rationale**: Relatively more hawkish Fed at the September FOMC, higher energy prices weighing on EUR **Risks to trade**: -

Asia rates strategy

On Asia rates, our high conviction trade is receive Korea H27-5y NDIRS (conviction level 4/5) with lower KTB issuance, stable core CPI inflation and some signs of slowing housing price gains. We also maintain a receive Dec-5y India NDOIS (conviction level 3/5) on elevated curve term premium.

We have turned towards slightly received in Asia rates. While medium-term headwinds from high energy prices, bond issuance from AI tech bellwethers and fiscal concerns are still intact, some stability in long-end US rates is possible after both the 10y and 30y UST auctions this week fared better. And with a few major central banks, such as the Fed, ECB and BOJ likely to keep policy rates on hold in October, there could be some near-term breathing space for global rates. That said, market volatility and uncertainty remain elevated, and we would set fairly tight reassess levels for the receive positions.

Korea: Maintain receive H27-5y NDIRS at conviction level 4/5

We retain a fairly high conviction level (4/5) on our receiving H27-5y NDIRS position, targeting a move to 3.95%, but will reassess on a break of 4.30%. Despite very strong export growth, the recent decline in IP, real wage and Seoul property price growth provided further evidence of a K-shaped economic structure. We also believe the likelihood of an aggressive BOK hike from here is not high after as the BOKhas already hiked twice, and FX depreciation concerns now should be lower than a few months ago. Hence, current terminal BOK policy rate pricing (~3.75%, 75bp hike from here) is likely at the upper end of the expected range. However, we see better value to receive further out (5y) than the front-end, as the Korea swap curve remains steep after adjusting for level of front-end rates, while the ongoing reduction in the monthly amount of KTB issuance might result in lower curve term premium. The focus next week will be on the 3y and 50y KTB auctions.

Singapore: Reduce pay Z26-5y SORA conviction level from 4/5 to 3/5

Despite Singapore's growth outlook remaining fundamentally strong, credit growth and the erential against the US remains wide, and our pay Dec-5y position has moved

知识星球：前沿信息收录
更多一手投研资料扫码加微信
知识星球：前沿信息收录
VX:FCCNN88

against us in the past week. Some reasons include relatively flush liquidity and better-than-previous 4w and 12w MAS bill auctions (higher bid-to-cover ratios). Next week features the advance estimate of Q3 GDP and the MAS announcement on 14 October. Nomura's base case is for the *MAS tighten the S$NEER slope "slightly"* (i.e., a 0.5pp rise), while we believe market expectations are more towards a "very slight" tightening (i.e., a 0.25pp rise). For SGD rates, the impact of a MAS FX tightening is not straight-forward, as in theory, a steeper slope could also mean lower rates by interest rates parity. And the SGD 5y swap is actually lower on the day on the two occasions when the MAS tightened earlier this year (in April and July). Hence, we decided to reduce conviction of the pay Z26-5y SORA position to 3/5 from 4/5 (current level 2.39%). But we maintain some pay exposure, as we still believe rising the Singapore loan-to-deposit ratio and low real yields should eventually result in higher local rates.

India: Moderate receive conviction level 3/5 on Dec26-5y NDOIS

The RBI delivered a well-expected 25bp hike but changed stance to "calibrated tightening", which was slightly hawkish in comparison with expectations. Still, our economics team continues to expect the current hike cycle will be *a shallow one* and based on that, we believe there remains some value to stay in India receivers. In terms of liquidity, the RBI remains noncommittal in measures and timing: the Governor does not expect the surplus conditions to last and within FY27 which could mean the RBI is more patient about draining liquidity over time. Indeed, WACR continues to be around 20bp lower than the repo rate since the RBI meeting. But we think further liquidity draining operations cannot be ruled out. Hence, we shifted our receive positions from **Sep27-1y NDOIS to Dec26-5y,** with the view curve likely to flatten should the RBI hike further. For next week, the key focus is September CPI data released on Monday, which will reflect the recent higher food prices and hence could pose upside risks. The auction to watch includes INR340bn in 10y G-Secs on Friday. We target Dec26-5y NDOIS to move to 6.58%, with a reassess level above 6.9%.

China: maintain Dec-1s5s steepener in Q4 (conviction 3/5)

The China market has just returned from the National Day golden week on Thursday. Holiday mobility and consumption data were generally weak, thanks to higher oil prices and still-subdued consumer confidence. That said, in property market, transaction volumes marginally improved on the latest round of *supportive measures*. Liquidity remains flush with the 7d repo fixing falling further to 1.38% today (below OMO rate of 1.40%), and rates moving slightly lower across the curve. On bond supply, we estimate the October-December monthly average net CGB and LGB issuance to be ~RMB1.1trn, much higher than the RMB730bn in Q4 2025. Note that today the MOF announced it will allow local governments to tap RMB500bn of unused bond quotas from previous years. This is largely in line with our *expectations*, and the key remains the bond issuance pace in coming weeks. Positioning wise, securities firms and onshore funds started to reduce bond holdings (mainly in 10y) after coming back from the holiday. We believe the trend may continue in view of the heavy positioning in both cash bonds and futures space. Next week, September inflation, export and credit data will be released. The 6m ORR announcement will likely be made on 14 October (RMB500bn maturing on 15 October). We hold a Dec-1s5s steepener trade with a conviction level of 3/5.

Australia rates: Next week should be more interesting

It has been a quiet week, with mixed, second-tier data and yields broadly unchanged. The September Melbourne Institute inflation measure rose by a moderate 0.3% m-o-m and we have fine-tuned our Q3 CPI tracking to 1.25% q-o-q (headline) and 0.96% q-o-q (trimmed mean). We continue to think this will put pressure on the RBA board to consider a rate hike in November, but our base case (70%) remains that it will look through an uncomfortably high Q3 CPI print – consistent with *press conference communication* from the RBA governor – and keep rates unchanged at that meeting. We think market pricing for this meeting (around 7bp of tightening) is about fair, and with this, we see few opportunities at the front of the curve currently. The coming week should be more interesting, with the RBA publishing meeting minutes and its annual report, and September labour force data and the NAB business survey being released. The governor has indicated that the board did consider the case for a pause in September, so we will look to these minutes to see how serious that discussion was. Its annual report will also contain details of its FX reserve holdings, noting that last year this revealed a reduced allocation to USD and increased EUR holdings, so we are on the lookout for any further

知识星球：前沿信息收录
VX:FCCNN88

changes here. On the labour force report, we expect a flat, below-consensus reading for employment – following a 39.5k jump in August, which may have been influenced by the hiring of temporary workers for the national census – along with a dip back in the participation rate and an unchanged unemployment rate of 4.6%, noting this would be a fraction above the forecast path in the RBA's August SOMP. A widening in French and peripheral European bond spreads remind us of Australia's strong budget position, stable institutions and low debt levels, and we continue to see potential for further, structural long-end outperformance in Australia.

Asia/AU Rates strategy view		Comments/trades
Receive Mar-27 5y Korea NDIRS	4.0 (Prev / Curr)	**Rationale for last conviction chg:** Raised conviction to 4/5 from 3 on 6 October **Target and timeline:** 3.95% by end-November, initiated on 29 September **Trade rationale:** K-shape economy, terminal rate pricing at upper end, KTB issuance cut, valuation (steep curve) **Risks to trade:** Higher CD fxing in Q4, global yields selloff
Dec-1s5s China NDIRS steepener	3.0 (Prev / Curr)	**Rationale for last conviction chg:** Initiated with conviction 3/5 on 22 September **Target and timeline:** 15bp gain by end-November, initiated on 22 September **Trade rationale:** Govt bond supply to pick up, liquidity to stay flush, heavy position in long-end CGBs, valuation **Risks to trade:** Tighter liquidity, weak econ data
Receive Mar-1y HK IRS	3.0 (Prev / Curr)	**Rationale for last conviction chg:** Initiated with conviction 3/5 on 22 September **Target and timeline:** 20bp gain by end-November, initiated on 22 September **Trade rationale:** Prime rates left unchanged, valuation **Risks to trade:** Higher HIBOR fixing, global yields selloff
Pay Dec-5y China NDIRS	3.0 (Prev / Curr)	**Rationale for last conviction chg:** Initiated on 27 August **Target and timeline:** 1.70% by end-November, initiated on 27 August **Trade rationale:** Govt bond supply to pick up, new supportive measures, positioning **Risks to trade:** Weak econ data, monetary easing expectation
Pay Dec-5y SGD	3.0 (Prev / Curr)	**Rationale for last conviction chg:** Reduced conviction to 3/5 from 4 on 9 October **Target and timeline:** 2.65% by end-November, initiated on 17 Sep **Trade rationale:** Low nominal and real yield, strong credit and export growth, upside risk in inflation **Risks to trade:** Flush liquidity/ low SORA fixing, strong demand in bill/bond auctions, ALM book buy bonds
Receive Dec-5y India NDOIS	3.0 (Prev / Curr)	**Rationale for last conviction chg:** Initiated with conviction 3/5 on 7 October **Target and timeline:** 6.58% by end-November, initiated on 7 October **Trade rationale:** Aggressive RBI rate hike pricing (vs. Nomura), RBI more patient in draining liquidity **Risks to trade:** Hawkish RBI, higher MIBOR fixing, global rates selloff
Long 10yr ACGB vs US10yr	2.0 (Prev / Curr)	**Rationale for last conviction chg:** Lowered conviction to 2/5 after recent outperformance and ahead of August CPI **Target and timeline:** - **Trade rationale:** Superior Australia debt demand and supply metrics, US long-end and de-dollarisation risks **Risks to trade:** US policy change incentivises purchases of UST

Source: Nomura

Previously, we asked "Where do you think the 10yr OAT-Bund spread will be by year-end (~145bp as of 2 October), and do you think the ECB will activate its Transmission Protection Instrument (TPI)?", ***45.5%*** chose *"150-200bp, do not activate TPI"* and ***25.6%*** chose "*<150bp, do not activate TPI*" and ***9.0%*** chose "*150-200bp, activate TPI*" and ***8.3%*** chose "*200bp+, activate TPI*" and **7.7%** chose "*200bp+, do not activate TPI*".

The analysts responsible for preparing this report have received compensation based upon various factors including the firm's total revenues, a portion of which is generated by Investment Banking activities. Unless otherwise noted, the non-US analysts listed at the front of this report are not registered/qualified as research analysts under FINRA rules, may not be associated persons of NSI, and may not be subject to FINRA Rule 2241 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Nomura Global Financial Products Inc. (NGFP) Nomura Derivative Products Inc. (NDP) and Nomura International plc. (NIplc) are registered with the Commodities Futures Trading Commission and the National Futures Association (NFA) as swap dealers. NGFP, NDPI, and NIplc are generally engaged in the trading of swaps and other derivative products, any of which may be the subject of this report.

ADDITIONAL DISCLOSURES REQUIRED IN THE U.S.
Principal Trading: Nomura Securities International, Inc and its affiliates will usually trade as principal in the fixed income securities (or in related derivatives) that are the subject of this research report. Analyst Interactions with other Nomura Securities International, Inc. Personnel: The fixed income research analysts of Nomura Securities International, Inc and its affiliates regularly interact with sales and trading desk personnel in connection with obtaining liquidity and pricing information for their respective coverage universe.

Valuation methodology - Fixed Income
Nomura's Fixed Income Strategists express views on the price of securities and financial markets by providing trade recommendations. These

知识星球：前沿信息收录
VX:FCCNN88

can be relative value recommendations, directional trade recommendations, asset allocation recommendations, or a mixture of all three.
The analysis which is embedded in a trade recommendation would include, but not be limited to:
• Fundamental analysis regarding whether a security's price deviates from its underlying macro- or micro-economic fundamentals.
• Quantitative analysis of price variations.
• Technical factors such as regulatory changes, changes to risk appetite in the market, unexpected rating actions, primary market activity and supply/ demand considerations.
The timeframe for a trade recommendation is variable. Tactical ideas have a short timeframe, typically less than three months. Strategic trade ideas have a longer timeframe of typically more than three months.

For the purposes of the EU Market Abuse Regulation, the distribution of ratings published by Nomura Global Fixed Income Research is as follows:
54% have been assigned a Buy (or equivalent) rating; 50% of issuers with this rating were supplied material services by the Nomura Group**.*
0% have been assigned a Neutral (or equivalent) rating.
46% have been assigned a Sell (or equivalent) rating; 50% of issuers with this rating were supplied material services by the Nomura Group.
As at 30 Sep 2026.
**As defined by the EU Market Abuse Regulation*
***The Nomura Group as defined in the Disclaimer section at the end of this report*

'NSFSPL' next to an employee's name on the front page of a research report indicates that the individual is employed by Nomura Structured Finance Services Private Limited to provide assistance to certain Nomura entities under inter-company agreements. 'Verdhana' next to an individual's name on the front page of a research report indicates that the individual is employed by PT Verdhana Sekuritas Indonesia ('Verdhana') to provide research assistance to NIHK under a research partnership agreement and neither Verdhana nor such individual is licensed outside of Indonesia.
THIS MATERIAL IS: (I) FOR YOUR PRIVATE INFORMATION, AND WE ARE NOT SOLICITING ANY ACTION BASED UPON IT; (II) NOT TO BE CONSTRUED AS AN OFFER TO SELL OR A SOLICITATION OF AN OFFER TO BUY ANY SECURITIES IN ANY JURISDICTION WHERE SUCH OFFER OR SOLICITATION WOULD BE ILLEGAL; AND (III) OTHER THAN DISCLOSURES RELATING TO THE NOMURA GROUP, BASED UPON INFORMATION FROM SOURCES THAT WE CONSIDER RELIABLE, BUT HAS NOT BEEN INDEPENDENTLY VERIFIED BY NOMURA GROUP.
Other than disclosures relating to the Nomura Group, the Nomura Group does not warrant, represent or undertake, express or implied, that the document is fair, accurate, complete, correct, reliable or fit for any particular purpose or merchantable, and to the maximum extent permissible by law and/or regulation, does not accept liability (in negligence or otherwise, and in whole or in part) for any act (or decision not to act) resulting from use of this document and related data. To the maximum extent permissible by law and/or regulation, all warranties and other assurances Nomura Group are hereby excluded and the Nomura Group shall have no liability (in negligence or otherwise, and in whole or in part) for howsoever arising from the use, misuse, or distribution of this material or the information contained in this material or otherwise arising

in connection therewith.

Opinions or estimates expressed are current opinions as of the original publication date appearing on this material and the information, including the opinions and estimates contained herein, are subject to change without notice. The Nomura Group, however, expressly disclaims any obligation, and therefore is under no duty, to update or revise this document. Any comments or statements made herein are those of the author(s) and may differ from views held by other parties within Nomura Group. Clients should consider whether any advice or recommendation in this report is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The Nomura Group does not provide tax advice.

The Nomura Group, and/or its officers, directors, employees and affiliates, may, to the extent permitted by applicable law and/or regulation, deal as principal, agent, or otherwise, or have long or short positions in, or buy or sell, the securities, commodities or instruments, or options or other derivative instruments based thereon, of issuers or securities mentioned herein. The Nomura Group companies may also act as market maker or liquidity provider (within the meaning of applicable regulations in the UK) in the financial instruments of the issuer. Where the activity of market maker is carried out in accordance with the definition given to it by specific laws and regulations of the US or other jurisdictions, this will be separately disclosed within the specific issuer disclosures.

This document may contain information obtained from third parties, including, but not limited to, ratings from credit ratings agencies such as Standard & Poor's. The Nomura Group hereby expressly disclaims all representations, warranties or undertakings of originality, fairness, accuracy, completeness, correctness, merchantability or fitness for a particular purpose with respect to any of the information obtained from third parties contained in this material or otherwise arising in connection therewith, and shall not be liable (in negligence or otherwise, and in whole or in part) for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including lost income or profits and opportunity costs) in connection with any use or misuse of any of the information obtained from third parties contained in this material or otherwise arising in connection therewith. Reproduction and distribution of third-party content in any form is prohibited except with the prior written permission of the related third-party. Third-party content providers do not, express or implied, guarantee the fairness, accuracy, completeness, correctness, timeliness or availability of any information, including ratings, and are not in any way responsible for any errors or omissions (negligent or otherwise), regardless of the cause, or for the results obtained from the use or misuse of such content. Third-party content providers give no express or implied warranties, including, but not limited to, any warranties of merchantability or fitness for a particular purpose or use. Third-party content providers shall not be liable (in negligence or otherwise, and in whole or in part) for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including lost income or profits and opportunity costs) in connection with any use or misuse of their content, including ratings. Credit ratings are statements of opinions and are not statements of fact or recommendations to purchase hold or sell securities. They do not address the suitability of securities or the suitability of securities for investment purposes, and should not be relied on as investment advice.

Any MSCI sourced information in this document is the exclusive property of MSCI Inc. ('MSCI'). Without prior written permission of MSCI, this information and any other MSCI intellectual property may not be duplicated, reproduced, re-disseminated, redistributed or used, in whole or in part, for any purpose whatsoever, including creating any financial products and any indices. This information is provided on an "as is" basis. The user assumes the entire risk of any use made of this information. MSCI, its affiliates and any third party involved in, or related to, computing or compiling the information hereby expressly disclaim all representations, warranties or undertakings of originality, fairness, accuracy, completeness, correctness, merchantability or fitness for a particular purpose with respect to any of this material or the information contained in this material or otherwise arising in connection therewith. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates or any third party involved in, or related to, computing or compiling the information have any liability (in negligence or otherwise, and in whole or in part) for any damages of any kind. MSCI and the MSCI indexes are services marks of MSCI and its affiliates.

The intellectual property rights and any other rights, in Russell/Nomura Japan Equity Index belong to Nomura Fiduciary Research & Consulting Co., Ltd. ("NFRC") and FTSE Russell ("Russell"). NFRC and Russell do not guarantee fairness, accuracy, completeness, correctness, reliability, usefulness, marketability, merchantability or fitness of the Index, and do not account for business activities or services that any index user and/or its affiliates undertakes with the use of the Index.

Investors should consider this document as only a single factor in making their investment decision and, as such, the report should not be viewed as identifying or suggesting all risks, direct or indirect, that may be associated with any investment decision. Nomura Group produces a number of different types of research product including, among others, fundamental analysis and quantitative analysis; recommendations contained in one type of research product may differ from recommendations contained in other types of research product, whether as a result of differing time horizons, methodologies or otherwise. The Nomura Group publishes research product in a number of different ways including the posting of product on the Nomura Group portals and/or distribution directly to clients. Different groups of clients may receive different products and services from the research department depending on their individual requirements.

Figures presented herein may refer to past performance or simulations based on past performance which are not reliable indicators of future or likely performance. Where the information contains an expectation, projection or indication of future performance and business prospects, such forecasts may not be a reliable indicator of future or likely performance. Moreover, simulations are based on models and simplifying assumptions which may oversimplify and not reflect the future distribution of returns. Any figure, strategy or index created and published for illustrative purposes within this document is not intended for "use" as a "benchmark" as defined by the European Benchmark Regulation.

Certain securities are subject to fluctuations in exchange rates that could have an adverse effect on the value or price of, or income derived from, the investment.

With respect to Fixed Income Research: Recommendations fall into two categories: tactical, which typically last up to three months; or strategic, which typically last from 6-12 months. However, trade recommendations may be reviewed at any time as circumstances change. 'Stop loss' levels for trades are also provided; which, if hit, closes the trade recommendation automatically. Prices and yields shown in recommendations are taken at the time of submission for publication and are based on either indicative Bloomberg, LSEG or Nomura prices and yields at that time. The prices and yields shown are not necessarily those at which the trade recommendation can be implemented.

The securities described herein may not have been registered under the US Securities Act of 1933 (the '1933 Act'), and, in such case, may not be offered or sold in the US or to US persons unless they have been registered under the 1933 Act, or except in compliance with an exemption from the registration requirements of the 1933 Act. Unless governing law permits otherwise, any transaction should be executed via a Nomura

entity in your home jurisdiction.
This document has been approved for distribution in the UK as investment research by NIplc. NIplc is authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority. NIplc is a member of the London Stock Exchange. This document does not constitute a personal recommendation within the meaning of applicable regulations in the UK, or take into account the particular investment objectives, financial situations, or needs of individual investors. This document is intended only for investors who are 'eligible counterparties' or 'professional clients' for the purposes of applicable regulations in the UK, and may not, therefore, be redistributed to persons who are 'retail clients' for such purposes.
This document has been approved for distribution in the European Economic Area as investment research by Nomura Financial Products Europe GmbH (“NFPE”). NFPE is a company organized as a limited liability company under German law registered in the Commercial Register of the Court of Frankfurt/Main under HRB 110223. NFPE is authorized and regulated by the German Federal Financial Supervisory Authority (BaFin).
This document has been approved by NIHK, which is regulated by the Hong Kong Securities and Futures Commission, for distribution in Hong Kong by NIHK. This document is intended only for investors who are 'professional investors' for the purposes of applicable regulations in Hong Kong and may not, therefore, be redistributed to persons who are not 'professional investors' for such purposes.
This document has been approved for distribution in Australia by NAL, which is authorized and regulated in Australia by the ASIC.
This document has also been approved for distribution in Malaysia by NSM.
In Singapore, this document has been distributed by NSL, an exempt financial adviser as defined under the Financial Advisers Act (Chapter 110), among other things, and regulated by the Monetary Authority of Singapore. NSL may distribute this document produced by its foreign affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. This document is intended for accredited, expert or institutional investors as defined by the Securities and Futures Act (Chapter 289). Where the recipient of this document is not an accredited, expert or institutional investor, NSL accepts legal responsibility for the contents of this document in respect of such recipient only to the extent required by law. Recipients of this document in Singapore should contact NSL in respect of matters arising from, or in connection with, this document. THIS DOCUMENT IS INTENDED FOR GENERAL CIRCULATION. IT DOES NOT TAKE INTO ACCOUNT THE SPECIFIC INVESTMENT OBJECTIVES, FINANCIAL SITUATION OR PARTICULAR NEEDS OF ANY PARTICULAR PERSON. RECIPIENTS SHOULD TAKE INTO ACCOUNT THEIR SPECIFIC INVESTMENT OBJECTIVES, FINANCIAL SITUATION OR PARTICULAR NEEDS BEFORE MAKING A COMMITMENT TO PURCHASE ANY SECURITIES, INCLUDING SEEKING ADVICE FROM AN INDEPENDENT FINANCIAL ADVISER REGARDING THE SUITABILITY OF THE INVESTMENT, UNDER A SEPARATE ENGAGEMENT, AS THE RECIPIENT DEEMS FIT.
Unless prohibited by the provisions of Regulation S of the 1933 Act, this material is distributed in the US, by NSI, a US-registered broker-dealer, which accepts responsibility for its contents in accordance with the provisions of Rule 15a-6, under the US Securities Exchange Act of 1934. The entity that prepared this document permits its separately operated affiliates within the Nomura Group to make copies of such documents available to their clients.
This document has not been approved for distribution to persons other than ‘Authorised Persons’, ‘Exempt Persons’ or ‘Institutions’ (as defined by the Capital Markets Authority) in the Kingdom of Saudi Arabia (‘Saudi Arabia’) or a ’Market Counterparty’ or a 'Professional Client' (as defined by the Dubai Financial Services Authority) in the United Arab Emirates (‘UAE’) or a ‘Market Counterparty’ or a ‘Business Customer’ (as defined by the Qatar Financial Centre Regulatory Authority) in the State of Qatar (‘Qatar’) by Nomura Saudi Arabia, NIplc or any other member of the Nomura Group, as the case may be. Neither this document nor any copy thereof may be taken or transmitted or distributed, directly or indirectly, by any person other than those authorised to do so into Saudi Arabia or in the UAE or in Qatar or to any person other than ‘Authorised Persons’, ‘Exempt Persons’ or ‘Institutions’ located in Saudi Arabia or a ’Market Counterparty’ or a 'Professional Client' in the UAE or a ‘Market Counterparty’ or a ‘Business Customer’ in Qatar. Any failure to comply with these restrictions may constitute a violation of the laws of the UAE or Saudi Arabia or Qatar.
For report with reference of TAIWAN public companies or authored by Taiwan based research analyst:
