Summary of the week

TOPIX: 4,104.81 (0.3%) / NK225: 69,030.92 (1.1%)

- Top sectors: Services, Rubber Products
- Bottom sectors: Non-Ferrous Metals, Banks

In this week's **Japan Weekly Kickstart**, we focus on client feedback on our AI framework report (October 1, 2026). Clients have generally agreed that AI and Banks have been the two biggest themes in Japan over the past year, with the AI theme becoming too big to ignore. Now with the end of the first year of PM Takaichi's administration approaching, we show the cumulative performance of AI-related stocks, banks, TOPIX, and TOPIX excluding AI/banks. As can be seen in Exhibit 1, TOPIX, excluding Banks and AI SM/HW stocks, only returned +8% since start of Takaichi administration, showing how it is hard to keep up with benchmark performance without exposure to either of the themes. Clients have also expressed interest in the AI application layer, and AI-adjacent thematics such as cybersecurity.

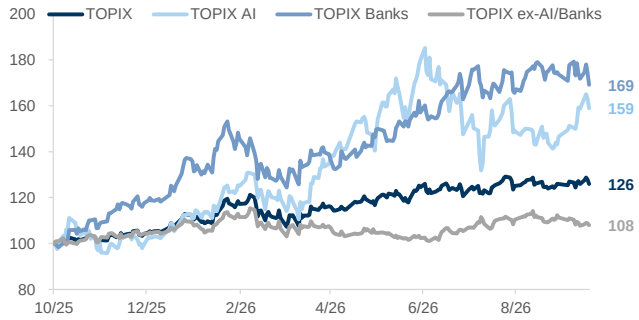

- **Cybersecurity stocks outperformed:** Our equal-weighted cybersecurity screen highlighted in our AI framework report gained +8% relative to TOPIX wow (Exhibit 3), as news reports suggest cyber attacks involving AI on Japan and South Korea businesses are increasing (link). Exhibit 4 shows the stock screen we highlighted in the report.
- **Next-Generation TOPIX first periodic review and FFW update:** According to the latest announcement from JPX, the free-float weight (FFW) adjustment factor for **Kioxia Holdings** will be adjusted from 0.15 currently to 0.50, with the implementation split across end-Oct and end-Nov. JPX also published the results of the first periodic review (link). The Asia Index Strategy team estimates that consensus TOPIX NTM PE ratio will decline from 15.5x to 15.0x, and consensus EPS CAGR for CY27-28 to increase from 11% to 12% (link).
- **Domestic Institutions, Foreigners, and Individuals were all net buyers:** According to the latest data from the TSE, for the week between Sep 28- Oct 2, Domestic Institutions, Foreigners and Individuals net bought ¥79bn, ¥982bn and ¥186bn of TSE Prime cash equities respectively.

Investors should consider this report as only a single factor in making their investment decision. For Reg AC certification and other important disclosures, see the Disclosure Appendix, or go to www.gs.com/research/hedge.html.

Appendix One - Methodology

Our original analysis which has now been integrated into the Japan Weekly Kickstart format focuses on sector and thematic performance of the more liquid portion of the Japanese equities market. This is defined as any Japanese stocks that trade over US$20mn adtv. We believe that a significant number of our clients have liquidity constraints which require them to limit their stand-alone positions to this particular universe. By our calculations, there are 271 stocks in Japan that trade above this liquidity threshold as of Dec 17 2025.

We have sub-divided this universe into 45 equal weighted indices that focus on either MSCI-defined sectors and sub-sectors, or areas of thematic focus that stretch across multiple sectors (such as High Dividend Yield or Gaming). For these thematic indices, we have relied either on quantitative measures and/or GS Equity analyst input on component selection. We hope to expand the number of indices over time and would welcome client feedback on any areas of thematic interest we should focus on.

We track the performance of the equal-weighted sector, sub-sector and thematic indices over time and also measure the spread between the best-performing and the worst-performing stocks within the index. For example, Exhibit 36 illustrates both the volatility of the mean weekly performance in the liquid SPE index (the dark blue line), and the weekly Best-Worst spreads within the index (the light blue cloud).

The criteria we have used in our analysis of the liquid Japanese equities market can be summarized as follows:

- Total universe consists of Japanese stocks with a 6-month adtv of over US$20mn (271 stocks as of Dec 17 2025).
- The universe will be refreshed every year.
- Indices are all equal-weighted.
- Index component selection is based on MSCI sector and sub-sector definitions, quantitative factors and/or GS single-stock Equity Analyst guidance.
- The same stock can appear in multiple indices.
- The Best-Worst spread is based on the difference between the best performing and worst performing component within each index.
- The first 12 months of trading of any new listing are not included in the index performance.

We anticipate that the number of indices will be adjusted over time and would welcome any client feedback on other areas within the liquid Japan equities universe we should be focused on.
